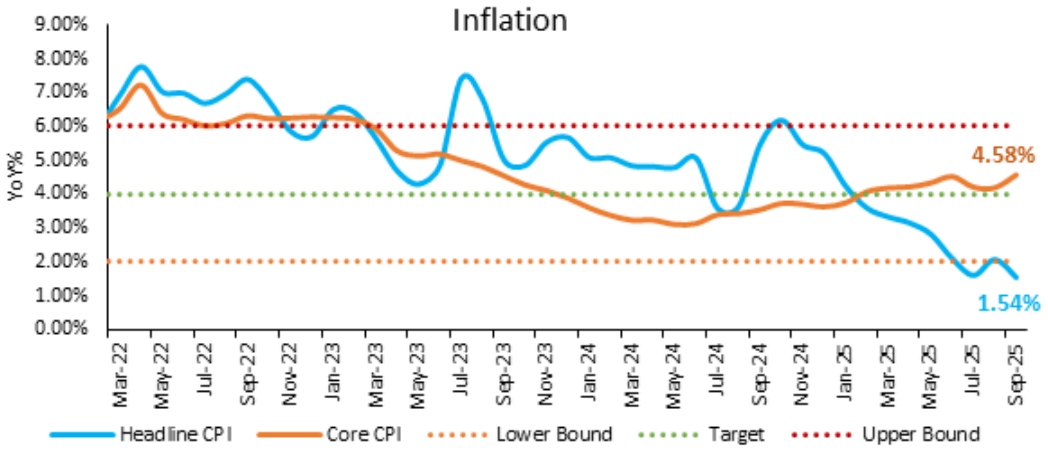
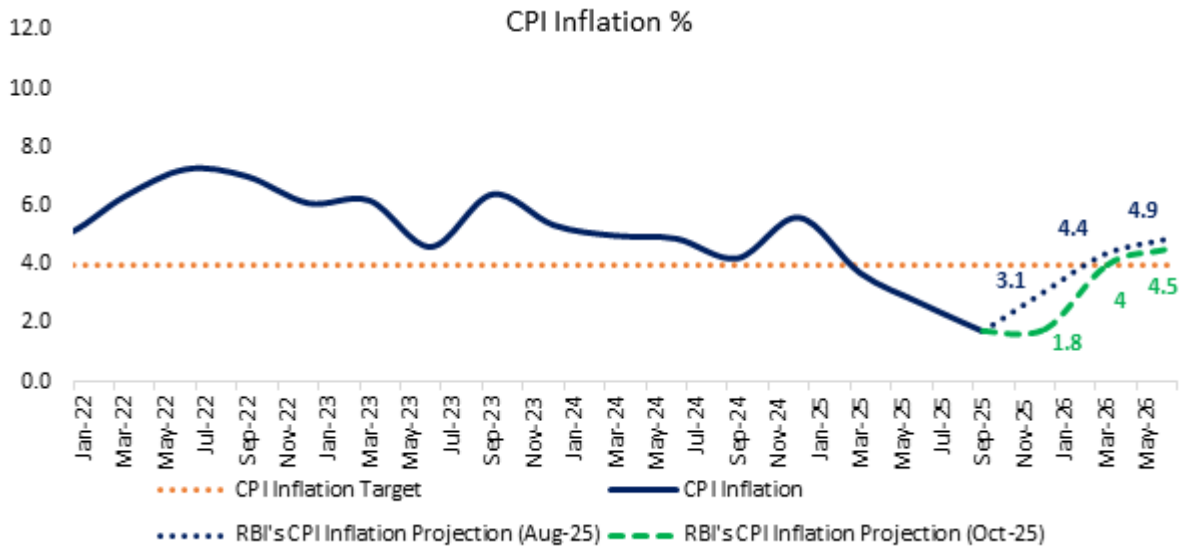
CPI inflation continues to breach the lower end of the inflation tolerance band:



Source: MoSPI, CMIE, JMF MF Research | As per latest available data

- Consumer Price Index (CPI) inflation stood at 1.54% in September 2025, the lowest reading in over 8 years.
- The reading was almost at the Bloomberg's median poll of 1.50%.
- Food and Beverages (F&B) witnessed a deflation of 1.35% in September 2025, sharpest decline in F&B since December 2018. Vegetables, pulses and products and spices continued its deflationary trend at -21%, -15% and -3% respectively. Cereals & products, highest weighted component in food and beverages basket, noted continued disinflation.
- Core CPI for the month of September 2025 stood at 4.58% (YoY), up from 4.21% in August 2025. This reading is the highest since September 2023.
- Over the last 3 months, the average sequential change in headline inflation stood at 0.51%, which is higher than the 6-month sequential change of 0.45% and the 12-month average of 0.13%.



Source: MoSPI, RBI, JMF MF Research | As per latest available data

- RBI revised down its annual inflation projection for FY'26 to 2.6% from 3.1% in the October 2025 MPC meeting. Furthermore, the quarterly projections were also lowered for Q3 FY'26 to 1.8% (from 3.1% earlier), Q4 FY'26 to 4% (from 4.4% earlier), and Q1 FY'27 to 4.5% (from 4.9% earlier).

INR under pressure:

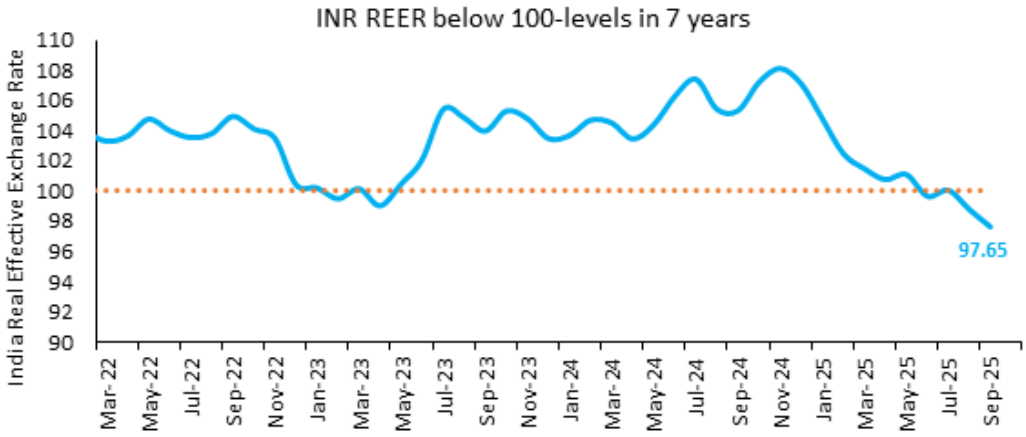
1M	0.09%	0.02%	-4.12%	-1.68%	-2.19%	2.08%
3M	1.21%	-1.34%	-2.15%	1.07%	-0.42%	-0.16%
6M	2.18%	-5.06%	-5.92%	2.19%	-0.95%	-0.44%
1Y	0.07%	-5.58%	-1.29%	6.00%	1.96%	-4.01%
CYTD	2.56%	-3.65%	2.07%	11.40%	5.07%	-8.00%

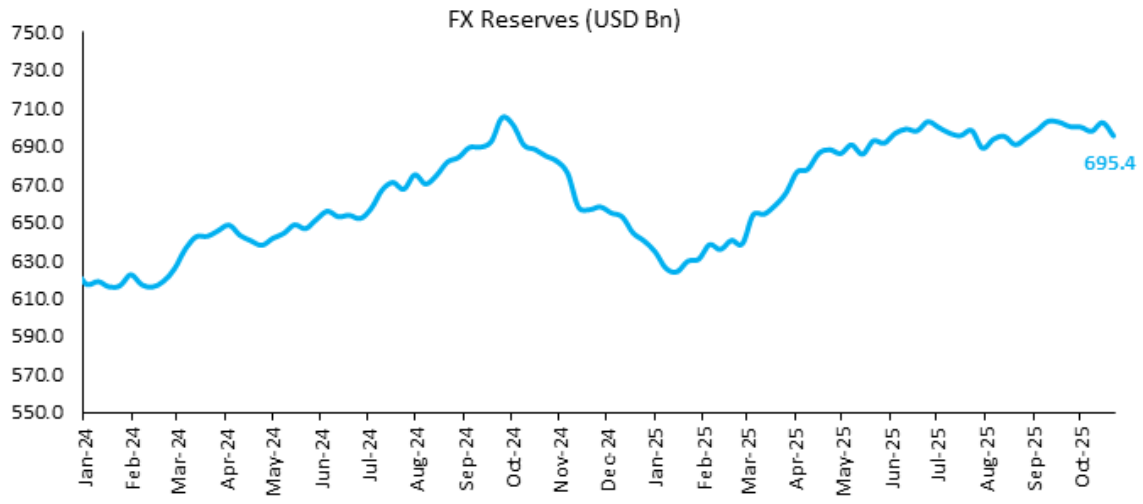
Source: Bloomberg, JMF MF Research | CYTD - Calender Year Till Date | As per latest available data

- DXY appreciated by 2.08% in the month of October after remaining flat in September 2025. The monthly appreciation in the DXY is primarily due to the weakening foreign currencies in the DXY basket. The Euro currency (which occupies a significant weight in the DXY basket) depreciated by 1.68%, Japanese Yen depreciated by 4.12% and GBP depreciated by 2.19%.
- However, on a CYTD basis, DXY has depreciated due to the levy of tariffs on US imports along with the appreciation of foreign currencies in the DXY basket. On a CYTD basis, the Euro has been appreciating as investors seek new havens during the current geopolitical turmoil. The evolving trade dynamics and a potential trade war can impact US growth adversely. Increase in US fiscal deficit on account of the recent tax cuts and a slowdown in economic growth can exert further pressure on the DXY.
- The INR witnessed a depreciation of 0.02% in October 2025. The currency traded in the range of Rs. 87.83-88.80/USD during the month and ended the month at low of Rs. 88.77/USD.



Source: Bloomberg, JMF MF Research | As per latest available data

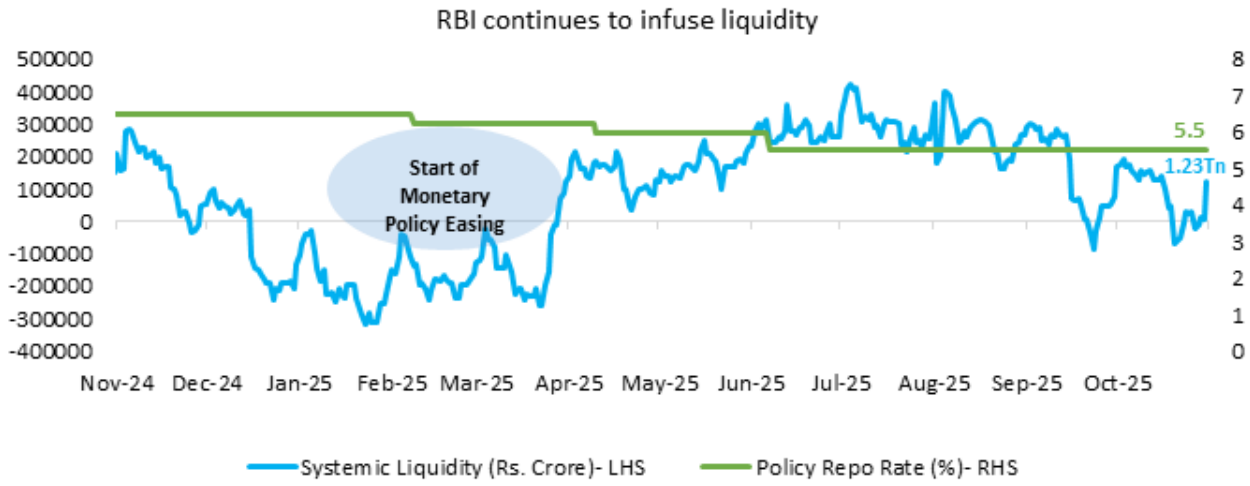
- In terms of the 40-currency Real Effective Exchange Rate (REER), INR is now undervalued (below 100), at a 7-year low of 97.65 after significantly coming down from its high in November 2024 (overvalued by 8.13%). Over the past 10 years, INR has been an overvalued by an average of 3.15%.
- In October 2025, FPIs were net buyers with net inflows of USD 1.70 Bn in equity markets and USD 2.1 Bn in the debt market.



Source: CMIE, JMF MF Research | As per latest available data

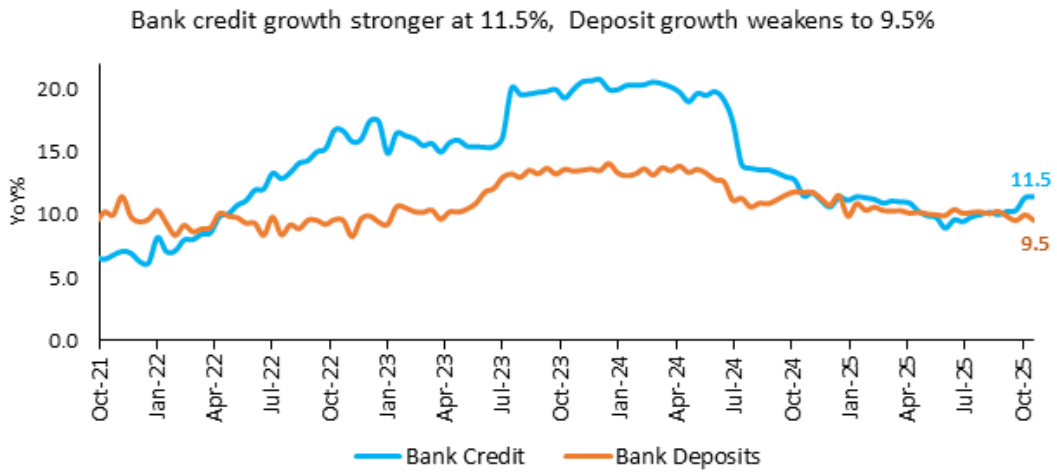
- Foreign Exchange (FX) reserves, after making a low in January 2025, have continued to remain adequate. FX reserves stood at USD 695.4 bn as on October 17, 2025, which is sufficient to cover over 11 months of merchandise imports.

Systemic liquidity remain relatively tight in October 2025:



Source: RBI, JMF MF Research | As per latest available data

- In October 2025, systemic liquidity was in deficit during the second half of the month, largely due to the RBI's intervention in the FX market and the increase in Currency In Circulation (CIC). The additional 25bps of CRR cut on October 4, 2025, and government spending helped ease the liquidity pressures during the first half of the month.
- For the month of October 2025, average system liquidity has been in surplus of ~₹85.5 Bn per day, lower than the average daily surplus of ~₹147.3 Bn in September 2025.
- Since January 2025, RBI has taken active steps including Cash Reserve Ratio (CRR) cuts, Open Market Operations (OMOs) purchases and USD/INR buy/sell swaps to infuse liquidity into the system.
- The remaining 50 bps of CRR cuts in November 2025 will further support liquidity conditions in the near term. This would infuse additional liquidity to the tune of ~₹1250 Bn in November 2025.
- Transmission of the previous 100bps of repo rate cut has been broad-based across sectors. The RBI endeavors to maintain sufficient liquidity surplus in the system for faster and smooth transmission of policy actions.



Source: RBI, JMF MF Research | As per latest available data

- In the fortnight ending October 17, 2025, bank credit grew by 11.5% on a year-on-year basis while bank deposits grew by 9.5%.
- On a FYTD basis, bank credit grew by 5.6% in FY'26 higher than 4.5% during FY'25. This marks the first time that credit growth has surpassed the previous year's FYTD growth numbers in this FY. On the other hand, deposit growth stayed at 4.5% as compared to 5.1% in the previous year on a FYTD basis. This implies a stronger pickup in credit growth and a moderation in deposit growth.
- Credit-Deposit Ratio stood at 80.4 in the fortnight ending October 17, 2025, slightly better than 80 in the previous fortnight ending October 03, 2025.

Our takeaways:

Global:

- While we may see Fed to delivering further cuts going ahead, we also believe Fed's actions are likely to be data driven
- While BoJ has kept rates unchanged in its recent policy, it is likely to eventually continue its rate hike trajectory. The continuing unwinding of yen carry trades may affect US yields adversely.
- The impact of tariffs on growth may be seen with a lag of a few quarters. We may note that further rate cuts by FOMC may take place in case of a sustained deterioration in growth or if labor markets materially weaken.
- China's continuing sluggish economy has support both from monetary and fiscal side to get its economy back on track. The resultant impact on commodity cycle upturn may be a development to be watchful of, especially for import dependent nations like India. During the month, oil prices decreased and closed the month at ~USD 63.90 bbl.

Domestic:

- RBI continued to show consistent support to the economy through periodic liquidity measures resulting in systemic liquidity being in the surplus for most part of October 2025. Such support from RBI is expected to continue to increase monetary transmission of rate cuts but may be calibrated by RBIs intervention in the forex market to support INR
- The RBI Governors dovish comments post the latest monetary policy (1st October 2025) have led to a build-up of rate cut expectations in the coming policies. The coming months may see bond markets also react to additional liquidity due to CRR cut linked inflows, FPI flows into bond markets, evolving GST reform related events and global cues such as UST rates, FOMC rate actions, crude oil prices and other geopolitical factors.
- Given the overall comfortable liquidity conditions, expected CRR cut linked inflows and a benign inflation projection, we may see bond participants continue to robustly participate at the shorter end of the curve.

Current Scheme Positioning:

We have strategically reduced duration across our portfolios and shifted towards selective carry assets, given the reasons mentioned above.

JM Liquid Fund
The Scheme continues to focus on enhancing accruals while aiming to keep appropriate mix of liquid and semi liquid money market assets.
JM Low Duration Fund
The Scheme aims to generate optimum risk adjusted returns in the current interest rate scenario. The Scheme has been deploying cash in securities between 6 months to 3 years to maintain an appropriate blend of accruals and duration in the portfolio. Overall, the scheme has invested in corporate bonds up to 3-year bucket to improve the accrual of the portfolio.
JM Short Duration Fund
The Scheme has reduced duration to ~2.25 years through a mix of government securities and AAA rated corporate bonds remaining within our internal guard rails (No exposure in non-AAA and no security > 5yr duration). The Scheme would continue to evaluate the macros to manage duration actively and maintain appropriate mix of asset class based on relative valuation to ensure optimum carry of the portfolio predominantly through 1-5 years AAA rated/Sovereign assets. We expect a continued steepening bias in the shape of the yield curve; hence, the scheme approach is likely to deliver better performance.
JM Dynamic Bond Fund
The Scheme has strategically reduced its duration, given the current position of the interest rate cycle. The Scheme endeavours to assess the risk-reward parameters on a continuous basis and would actively manage duration in accordance with its mandate as the macros may require tweaking duration stance frequently.
JM Medium to Long Duration Fund
The Scheme has strategically pulled back its duration towards the lower end of the regulatory framework (SEBI mandate 4-7 years). The Scheme endeavours to assess the risk-reward parameters on a continuous basis and would actively manage duration in accordance with its mandate.

The above mentioned approach might change depending upon market conditions and Fund Managers views, but will be within the limits of the Scheme Information Document. Source: Bloomberg, Cogencis, RBI, Reuters, Refinitiv, investing.com, tradingeconomics.com

Past performance may or may not be sustained in future and the same may not necessarily provide the basis for comparison with other investment.
