HOW TO READ A FACT SHEET

Details as on September 30, 2025

The below definitions are in alphabetical order.

AUM : Assets Under Management (AUM) refers to the recent / updated cumulative market value of investments managed by a mutual fund or any investment firm.

Application Amount for Fresh Subscription : This is the minimum investment amount for a new investor in a mutual fund scheme.

Benchmark : A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE200, BSE500, 10-Year Gsec, etc.

Beta : Beta (β) is a measure of the volatility—or systematic risk—of a security or portfolio compared to the market as a whole (usually the S&P 500). Stocks with betas higher than 1.0 can be interpreted as more volatile than the S&P 500.

Entry Load : A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is Rs. 100 and the entry load is 1%, the investor will enter the fund at Rs 101.

Note: SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor.

Exit Load : Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is deducted from the prevailing NAV at the time of redemption. For instance, if the NAV is Rs 100 and the exit load is 1%, the redemption price would be Rs 99 Per Unit.

Fund Manager : An employee of the asset management company such as a mutual fund, who manages investments of the scheme.

Holdings : The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

IDCW : Income Distribution cum Capital Withdrawal is the new name for Dividend as per recent SEBI Guidelines.

Modified Duration : Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

Minimum Additional Amount : This is the minimum investment amount for an existing investor in a mutual fund scheme.

Nature of Scheme : The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have subcategories.

NAV : The Net Asset Value (NAV) is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.

Rating Profile : Mutual funds invest in Fixed Income / Debt Securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the Debt Scheme.

SIP : Systematic Investment Plan (SIP) works on the principle of making periodic investments of a fixed sum. It works similar to a recurring deposit of a bank.

Standard Deviation : Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

Sharpe Ratio : The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

Yield to Maturity : The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

Total Expense Ratio - As on last day of the month & includes additional expenses provided in Regulation 52(6A)(b) and 52(6A)(c) of SEBI (Mutual Funds) Regulations, 1996 and Goods and Service Tax on Management Fees.

EQUITY MARKET OUTLOOK

Details as on September 30, 2025

The Month That Was

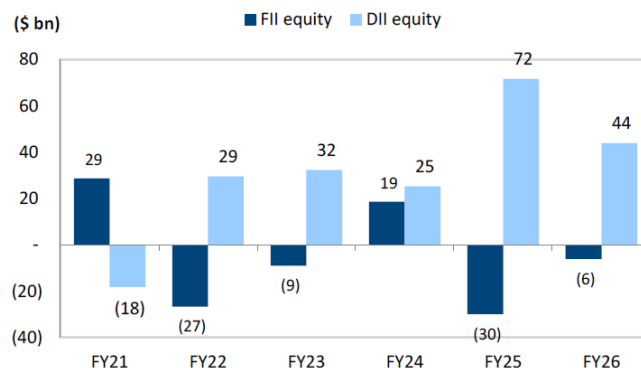

September 2025 was the month of two halves. The month started on a positive note following improving economic data (August CPI inflation at 2.1%, Index of Industrial Production (IIP) for August 2025 at 4%) GST rate cut, optimism around India-US trade talks and the US Fed rate cut. However, the market witnessed a sharp fall on Trump administration's decision to impose a one-time fee of US\$100,000 on new H-1B visa petitions and a 100% tariff on branded drug imports leading to accentuated FII outflows of US\$1.6 Bn for the month. So while Nifty ended the month with 0.8% gains with Midcaps and Small Caps outperforming with gains of 1.4% and 1.1% respectively, India's underperformance has become stark with developed markets (S&P 500 +5%, Japan +5.2%, Europe 0.9%) and Emerging Markets (EM) (Brazil +3.5%, South Africa +5.1%, Korea +7.5%, Mexico +6.6%, MSCI China +8%). India's Price-to-Earnings (P/E) premium to world/EM is now below last 10Y levels with most markets trading higher than their long-term average. India's underperformance is further accentuated by the decline in currency leading to vicious circle on continued FII selling.

Source: EPFR, CEIC, IIFL Research September 30, 2025

Increased Global led volatility

Global trade dynamics continued to face heightened uncertainty, with recent policy measures announced by the US administration under President Trump creating renewed headwinds for Indian markets. In addition to tighter scrutiny of H1B visa norms, the administration has imposed a 100% tariff on branded and patented pharmaceutical imports under its "Made in America" agenda. India's pharmaceutical exports; however, are predominantly generic, which limits the immediate direct impact, though the changes could gradually influence procurement patterns, pricing dynamics and regulatory priorities. For IT services, stricter H1B regulations are expected to increase onsite delivery costs and constrain workforce mobility. Coupled with the unresolved 25% tariff deadline on other export categories, these measures underscore the rising unpredictability of US trade policy and require close monitoring.

Primary Issuances Adding to Pressure on Secondary Markets

Supply continues to surge, with fund-raising activity remaining elevated at over US\$ 16.2 bn year-to-date, including US\$ 1.7 bn in September 2025 alone, and led by a strong pipeline of QIPs and IPOs. While supply has so far been absorbed reasonably well, the pace of issuance is accelerating, and sustained activity could begin to test market depth.

Government Stimulus to Drive Consumption Continues

The proposed GST rationalisation is expected to gradually stimulate demand, with the auto sector already reflecting early signs of improvement ahead of the festive season. We expect these benefits to cascade into FMCG, durables, cement and other discretionary categories over time, supported by rural recovery and direct tax relief. Importantly, the festive period is anticipated to provide an additional fillip to consumption across categories, with expectations already building in both autos and staples. The move to a 5%/18%/40% slab structure, along with the resolution of inverted duty issues, has reduced effective tax burdens on mass consumption items while also easing input costs for products. Taken together, these measures should support a steady strengthening of consumption momentum through H2 FY'26

Consensus Earnings Have Settled Down

The cuts to FY26 NSE200 EPS estimates eased in September, as the month saw EPS estimates unchanged after 12 consecutive months of cuts. The pace of cuts for FY27E earnings also slowed to 0.2%, keeping rolling 3M cuts at -1.0% for FY26/27E. The month saw a significant upswing in earnings trajectories, with 37% of firms of MoM upgrades to FY26E being the highest since October 24. The FY27E earnings upgrades spread was also high at 36%, while downgrades to FY26/27E were relatively flat at 59/57%.

Mid-cap premium to the Nifty continues to correct, falling to 30% in September 25 vs 72% a year back, and now only marginally ahead of the 10Y average of 25%. On the other hand, small- caps premium at 25% remains higher than historical standards. The NSE200 z-score remains relatively high at 0.7, with pharma and staples the most expensive and utilities, telecom, and financials relatively reasonable.

Economic Data Points remains promising:

- A. 5M FYTD central fiscal data shows weak direct taxes (-1% YoY) driven by 2.5% drop in income tax receipts while corporate tax collections rose by only 2% YoY. This is largely explained due to the shift in tax deadline to 15-September vs. 31-July last year. While FY'26 fiscal deficit target (4.4% of GDP) may face pressure due to soft tax inflows - tax shortfall in FY26 unlikely to exceed Rs. 1tn - and nominal growth risks, this can be managed via asset sales/higher PSU dividends. More importantly, the 2H borrowing calendar reiterates the target, as expected.
- B. Non-food bank credit growth has come in at 10.2% YoY as of September 5, 25 (vs 9.9% YoY on July 25, 25) while deposit growth has moderated slightly to 9.8% YoY (vs 10.2%). Consistent improvement in sequential trends over last two months indicate that system credit growth may have moved past the inflection point towards a steady recovery path.
- C. Monetary policy maintained its pause stance but on the other hand increased FY'26 GDP growth forecast from 6.5% to 6.8% with Q1FY'27 GDP growth at 6.4% with inflation forecast for FY'26 lowered from 3.1% to 2.6%. However, Q1FY'27 inflation is expected to inch upwards to 4.5%.
- D. September 2025 Manufacturing PMI eased to 57.7 vs. 59.3 in the last month, but highlighted continued growth across the sector. New business volumes rose further in the month supported by reports of demand buoyancy and pick-up in growth of international orders. Competitive conditions was cited as the major reason for softening growth.
- E. Monsoon has been very good with cumulative rains at 8.0% above Normal. Spread is also good with 33 out of 36 sub-divisions having received Excess/Normal rains.
- F. Total GST collected in August 2025 (for business activity in July 2025) was Rs 1.86 trillion vs Rs 1.96 trillion in July. GST collection was 6.5% higher YoY. GST collection has slowed in the past couple of months indicative of muted aggregate demand. For April 2025 - August 2025 Gross GST collection is Rs 10.04 trillion vs 9.14 trillion (up by 9.9%).
- G. August CPI inflation rose to 2.07% from 8-year low of 1.55% in July 2025 driven mainly by seasonal rise in food and beverage inflation. Core inflation was flat sequentially at 4.15%.

Glass Half Empty, Half Full:

Market sentiments continue to be impacted by concerns of geo political issues, uncertainty around US-India relationships, weak private capex and subdued demand despite fiscal and monetary easing along with continued issuances of primary paper reducing liquidity in secondary markets.

We expect festive demand to pick up meaningfully – impact of which will be witnessed in Q3 results along with logical conclusion of negotiation between US and India should bring calm to the market. Primary market momentum remains robust – suggest interest in Indian markets remain and not waning contrary to popular perceptions. Favourable domestic macros (low oil prices, interest rates and inflation) should spur credit growth and aid in resumption of private capex, which should have multiplier impact on the economy.

It is easy to be pessimistic, given the negative news flow and sell off by FPIs, but we have a more balanced view of the current environment. The recent changes in trade and geo politics will push Indian manufacturing to a more integrated approach with an emphasis on localisation. This trend is positive for employment (which is required, given our demographics), and capital formation. India will need to balance infrastructure with consumption, as these are two significant drivers for our economy. The Government is aware that a mere tax and spend approach reduces consumption, and has reduced GST rates to improve the consumption sentiment. As to how the government balances lower GST rates and collections and maintain its fiscal deficit, targets remains to be seen. India will need to negotiate with several trade partners to access technology and capital to pursue this agenda. Thawing of relationships with China and US are key to this continued growth. The macro conditions have not been better, as also the robust corporate health, which makes us believe that the current market pause is a passing phase.

We therefore remain positive on India equities over the next few quarters as the impact of a reasonably good monsoon, benign inflation and lower prices (due to GST reduction) play out. Further, as geopolitical tensions ease and trade relationships normalise, we could expect the return of FPI investors. We are cautiously optimistic on the new age companies focussing on platform delivery, travel, hospitality, and alternate energy. The earnings cycle is bottoming out as evidenced by the nascent recovery in the past few quarters, and gradual recovery is expected. Due to the recent uncertainty in global trade, our portfolios have shifted to domestic oriented businesses.

Scheme wise Fund Managers Commentary

Scheme	Portfolio commentary	Portfolio Positioning
JM Flexicap Fund	- We added 2 new stocks to our portfolio and sold 1 stock. - Portfolio is underweight materials, oil & gas, utilities sector and overweight capital goods and consumer discretionary sectors. - The Scheme outperformed this month backed by our stock selection in IT sector and overweight stance on consumption.	- Portfolio is focusing on bottom up stock picks, which is the best approach in face of sharp market volatility. - We will continue focusing on consumption given positive tailwinds from the festive season ahead. - We are expecting all the global geopolitics to lead to narrow growth opportunities and our focus would be on capturing those.
JM Value Fund	- The Scheme had 3 new additions and 3 deletions this month. All new additions focused on selling lower growth names to add high growth names with reasonable valuations. - The portfolio is overweight on consumer discretionary and industrials with slight underweight on pharma and IT. - The portfolio outperformed the benchmark with broad based with consumption focus helping us all the way.	- If the current market volatility persists and throws up opportunities, we will look to add new names in midcap and large cap space as well. - We are focusing on adding smaller names with deep value as the sentiment over the last one year is throwing new opportunities. - We are also looking at special situations and turnaround as a theme in this Scheme as we anticipate M&A to accelerate post the market correction. - We also think GDP in H2 will bounce back as clarity on macros will improve either ways.
JM Large Cap Fund	- During the month, we added 2 stocks and sold 1 stock as we focused on sectoral diversification. - The portfolio kept pace with the benchmark in spite of heavy FII selling in the segment and the related market volatility. Our decision to stick to consumption names with conviction helped the portfolio amidst the volatility.	- We will focus on bottom up ideas, which can grow their earnings consistently in current macro-economic environment. - The Scheme will continue to have its fair share of Small and Midcaps (SMIDs) where the objective is aid alpha generation. - As FII selling slows, we expect to focus more on financials and consumption related focus.
JM Focused Fund	- We have added 1 new stock this month - The Scheme outperformed driven by financials, consumer discretionary and industrial sectors.	- We will move to a more structural opportunity stance with focus on higher growth. - We are willing to add to our SMID weightage here as we see better risk reward into H2.
JM ELSS Tax Saver Fund	- We have added 2 new stocks this month. - The Scheme saw some volatility driven by some specific stocks in financials, industrials and consumer sectors. We are however confident about the long term potential of our portfolio and will continue to back these names.	- We intend to keep the portfolio fairly balanced across sectors. - Focus remains on bottom up ideas across market caps, which can demonstrate resilient earnings performance with higher growth over next 2 years.
JM Midcap Fund	- We add 5 new names this month as we saw more opportunities available to diversify. We sold nothing here. - Scheme outperformed as most of our bottom up stocks across sectors delivered strongly during the result season.	- We are adding stocks where there is a window of opportunity due to market having beaten them down due to near term disappointments. - Focus would be on bottom up ideas, which would deliver alpha over the longer term due to the inherent growth attributes of those respective businesses.
JM Small Cap Fund	- We have added 1 new stock while we sold off 1 name. - The Scheme outperformed the benchmark driven by materials and consumption.	- We are gravitating towards stronger high growth businesses, which might be under owned. - We may make the portfolio sharper with post the result season as we get clarity on names which may have an execution edge in the current macro environment.
JM Large & Mid Cap Fund	- We completed investing NFO proceeds with addition of 5 new names. - We sold 2 names where we saw incrementally higher risks to estimates.	- We will watch the performance of this portfolio during the result season before we make any major changes. - We may add to the growth element of the portfolio incrementally.
JM Aggressive Hybrid Fund	- We had 2 new addition in this Scheme during the month. - The Scheme saw stable performance driven by financial, industrial and consumption sector.	- We will look to add to new stocks if we get new ideas in the result season. - We may focus more on the financial sector in the next quarter. We intend to balance between Large and SMID sector in the medium term. - We are sanguine about keeping higher weight in equity as allowed by the asset allocation pattern given the time correction over the last 5 quarters.

Note: The above exposure/positioning is subject to change basis Fund Managers views & market conditions, but will be within the limits of the Scheme Information Document(s) of the respective Scheme(s).

Past performance may or may not be sustained in future and the same may not necessarily provide the basis for comparison with other investment.

H2 - stands for second half of the year

Crypto and Capital Markets

The Rise of Digital Finance

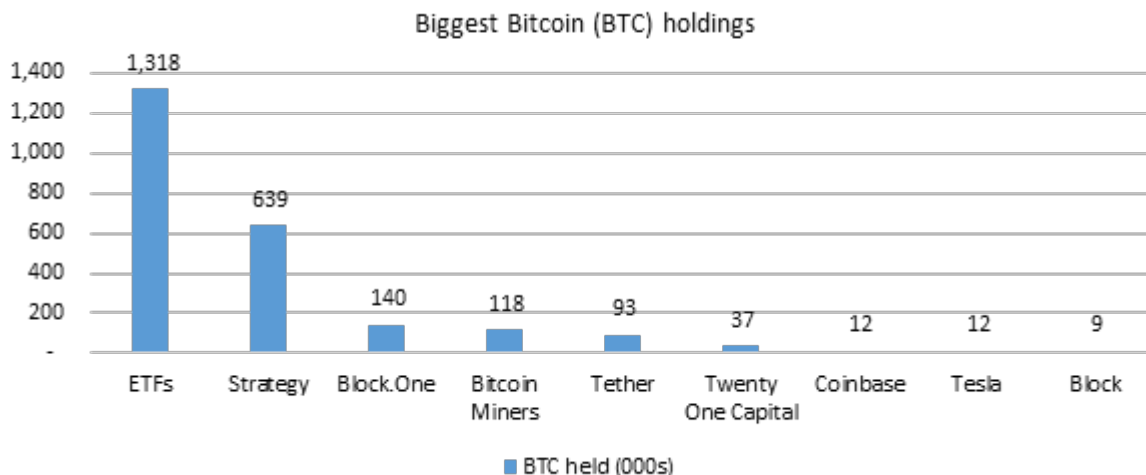

Details as on September 30, 2025

Digital Assets in Capital Markets: Bitcoin, Stable coins, and the New Financial Architecture

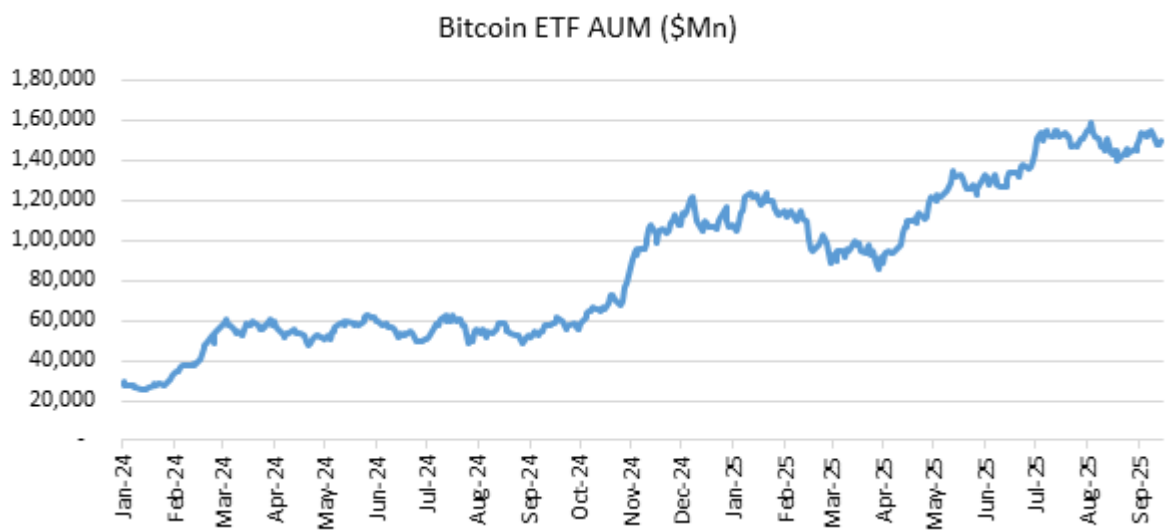

Crypto assets have evolved from speculative instruments into a parallel financial system. With a \$2 Trillion + market cap — larger than many emerging equity markets — the asset class now moves with macro liquidity cycles and attracts institutional allocations. The ecosystem rests on three pillars: Bitcoin as the scarce monetary asset, Ethereum as programmable infrastructure, and stable coins as digital settlement rails. Each plays a distinct role, but Bitcoin remains the anchor, increasingly treated as a portfolio allocation rather than an experiment.

Bitcoin's monetary policy is uniquely transparent: issuance declines every four years in predetermined “halving” events, unlike fiat currencies where supply is discretionary. This predictability has elevated Bitcoin from a speculative token into a scarce collateral asset in digital finance. Institutional adoption has accelerated — U.S.-listed ETFs have accumulated tens of billions in AUM within months, and long-term holders hold more than 70% of supply. The result is a market with both constrained float and structural, regulated demand.

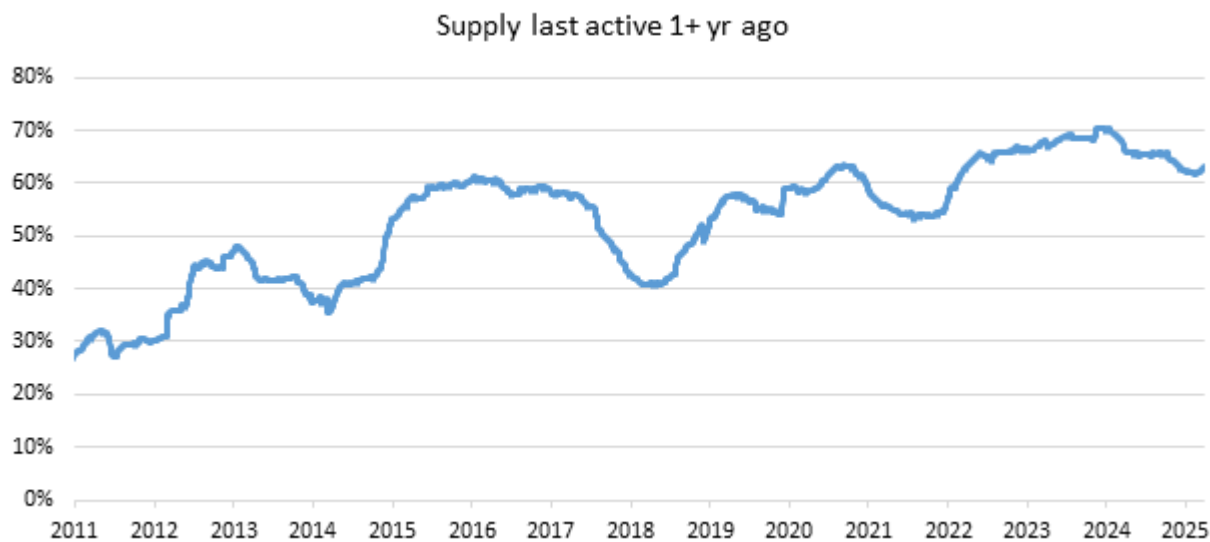

Source: JMF MF Research, Bernstein, Data as on September 30, 2025

Bitcoin has delivered strong performance YTD, outpacing equities and gold. The difference from prior cycles lies in the composition of demand. Spot ETFs have absorbed ~\$15B YTD — a pace faster than gold ETFs achieved at launch — and this capital is sticky, regulated, and institutional. Liquidity has matured as well: derivatives open interest is higher than in 2021, spreads are tighter, and custody solutions are institutional grade. Unlike earlier cycles driven by leverage and retail euphoria, this uptrend is anchored in structural inflows and deeper market infrastructure.

Source: Bloomberg, JMF MF Research, Data as on September 30, 2025

In 2026, miner rewards will halve again, reducing annual new issuance. Historically, halving triggered speculative rallies; this cycle is different. ETF inflows already exceed miner issuance by multiples, meaning the demand shock is mechanical, not narrative driven. As miners face revenue compression, many are diversifying into AI data centres, further reducing sell pressure. The implication: Bitcoin’s next leg higher is likely to be shaped less by hype and more by **structural absorption of supply through capital-market vehicles**. Forecasts for \$150K–200K cycle highs are built on this foundation (Source: Bernstein Research).

Source: Bernstein, JMF MF Research, Data as on September 30, 2025

Beyond Bitcoin: Ethereum and Tokenization

While Bitcoin anchors the asset class, the broader digital ecosystem is evolving rapidly. Ethereum remains the leading programmable block chain, underpinning decentralized finance (DeFi), tokenization initiatives, and most of the smart contract activity. Its role is less about monetary scarcity and more about infrastructure, offering investors exposure to the “technology layer” of crypto. Tokenization of real-world assets, from U.S. Treasuries to private credit, is expanding as institutions explore efficiency gains. Together, these developments extend the investment narrative beyond Bitcoin, positioning crypto as both a **monetary asset class and a financial technology platform**.

Rank	Coin/Category	Market Cap(\$bn)
1	Bitcoin	2136
2	Ethereum	295
3	Stablecoins	225
4	XRP	124
5	BNB	94
6	SOL	75
7	TRON	26
8	DOGE	24
9	ADA	20
10	HYPE	12

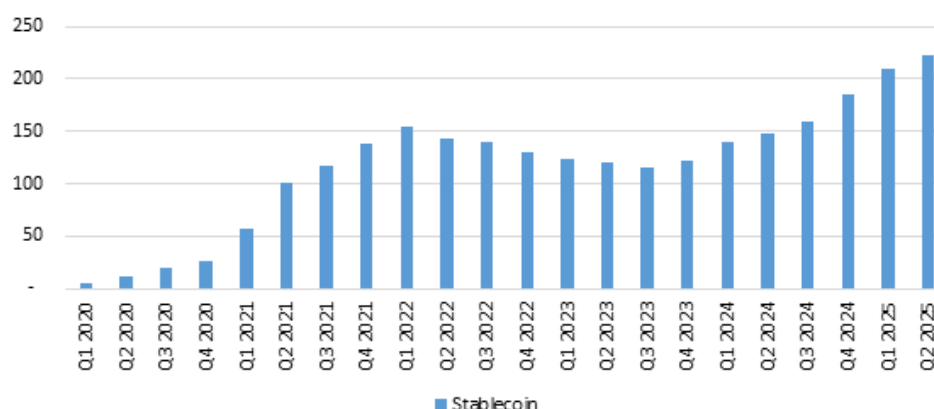

Source: Bernstein, JMF MF Research, Data as on September 30, 2025

Stable coins and the Broader Ecosystem

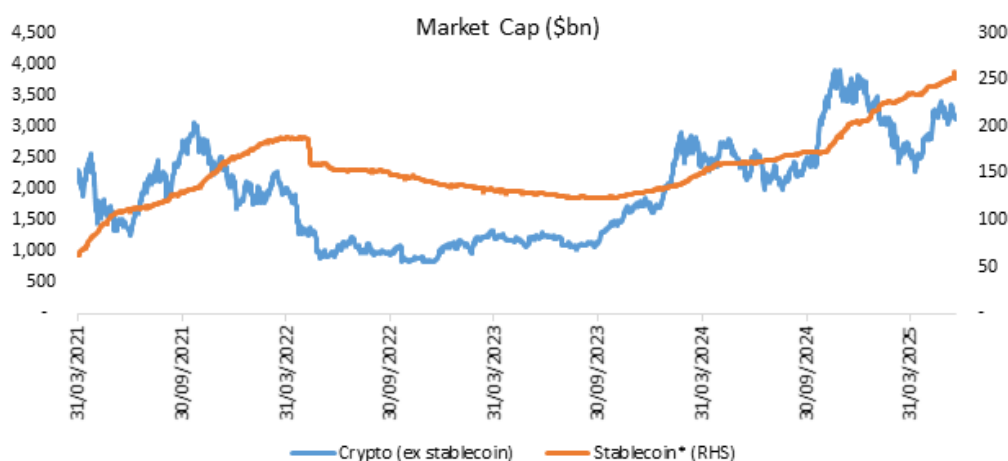

Stable coins are the first crypto product to achieve global product-market fit. With ~\$225B in circulation and more than \$7 Trillion settled annually, they function as **programmable cash** for payments, remittances, and Decentralized Finance. Their velocity is high, making them the working capital of block chain finance, in contrast to Bitcoin's role as a long-duration savings asset.

The **GENIUS Act** in the U.S. has solidified their standing: issuers must maintain 1:1 liquid reserves and operate under U.S. regulatory oversight. This effectively ring-fences the market for domestic issuers, with Circle's USD Coin (USDC) emerging as the de facto digital dollar. By 2035, stable coin supply is projected to surpass \$4 Trillion, embedding them as the internet's settlement layer. For Bitcoin, this is a tailwind: stable coins anchor liquidity and integrate digital assets into mainstream finance, reinforcing the ecosystem in which Bitcoin is the reserve asset.

Stablecoin Supply has seen rapid increase

Bitcoin in Context: Comparative Performance

Bitcoin has been the best-performing major asset over the past 12–18 months. In 2024–2025 YTD, it delivered ~166% returns, compared with ~97% for Ethereum, ~34% for global equities, and ~84% for gold. This divergence underscores Bitcoin's dual profile: it captures growth-asset upside in risk-on regimes yet is increasingly used as a portfolio hedge alongside gold in uncertain periods.

Risk-adjusted metrics have also improved. Bitcoin is trailing 12-month Sharpe ratio (~2.0) has outpaced equities and gold, reflecting a stronger return per unit of risk compared to prior cycles. Correlations remain fluid: Bitcoin tends to trade with equities in liquidity-driven rallies but decouples in stress periods, where gold traditionally leads.

For allocators, Bitcoin is best viewed as a barbell asset. Paired with gold or Treasuries, it enhances portfolio efficiency by combining stability with asymmetric upside. A modest allocation can materially improve risk-adjusted returns, while its capped supply introduces a scarcity premium absent in fiat-denominated assets.

Legal Aspects on Crypto Currency

In India, crypto assets are not recognized as legal tender but remain accessible for investment under a defined taxation framework. The current regime imposes a **30% flat tax on gains**, prohibits offsetting of losses against other income, and levies a **1% Tax Deducted at Source (TDS)** on transactions above certain thresholds. While this structure ensures the government captures tax revenues, it has also reduced onshore trading volumes by raising friction costs for investors.

Despite these constraints, participation continues through a mix of domestic exchanges, offshore platforms, and regulated global products such as ETFs. Institutional adoption is limited, but retail engagement remains meaningful, particularly among younger investors seeking alternative assets. Policy discussions on a comprehensive regulatory framework, including licensing and oversight of exchanges, are ongoing but remain unresolved.

MSCI ACWI - MSCI All Country World Index

For investors, the implications are twofold. First, the tax drag materially reduces effective returns, which needs to be factored into allocation decisions. Second, the absence of clear regulatory guidance introduces a risk premium relative to global peers, as policy shifts could alter the operating environment quickly. At the same time, India's large retail base and strong digital adoption trends suggest long-term potential, provided regulation evolves toward a more enabling framework.

Asset Class	Holding Period	Tax Rate	Loss Set-off	Special Features	1 Year Returns	3Year Returns
Crypto	Any	30% flat	☒ Not allowed	1% TDS on transfer	80.13	484.65
Equity Shares / Equity MF	< 1 year	15%	☒ AI-lowed	LTCG @12.50% after ₹1.25L exemption	-4.65	43.97
	≥ 1 year	10%	☒ AI-lowed			
Debt Funds / Bonds	Any	Slab rate	☒ AI-lowed	No LTCG benefits post 2023	7.05	27.7
Gold (physical/ETF)	< 3 years	Slab rate	☒ AI-lowed	Indexation for LTCG	52.91	129.18
	≥ 3 years	20%	☒ AI-lowed			
Real Estate	< 2 years	Slab rate	☒ AI-lowed	Reinvestment exemptions		
	≥ 2 years	20%	☒ AI-lowed			

Source: Bloomberg, Returns for Assets classed are calculated using the BITCOIN Index for Crypto, Nifty 50 Index for Equity, Crisil 10-year Gilt Index for Debt, MCX Gold Spot Prices for Gold. Data as on September 30, 2025.

Conclusion:

The institutionalization of Bitcoin is irreversible. ETFs, custody, and long-term holder dynamics have shifted it from speculative cycles to a structural allocation within global portfolios. The evolution ahead is about scale and integration — ETFs expanding globally, miners transforming into digital infrastructure providers, stable coins embedding themselves into payment rails, and tokenization linking block chain finance with real-world markets.

For investors, Bitcoin is best viewed as part of a **portfolio barbell**. It offers convex upside while traditional hedges like gold or Treasuries provide stability, creating a more efficient portfolio mix that balances growth optionality with defensive anchors.

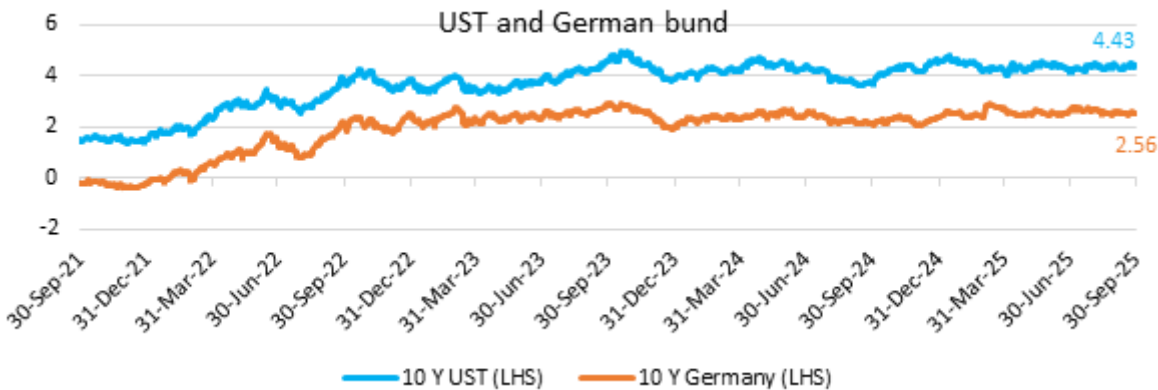

In India, the framework is still developing. Taxation and compliance rules create some friction, but they also reflect a policy shift toward formalizing the asset class. With a large retail investor base and one of the world's most advanced digital payments ecosystems, India has the potential to become a significant participant in the next phase of adoption once regulatory clarity improves.

Ultimately, crypto has moved beyond the question of legitimacy. Bitcoin remains its anchor, but the ecosystem now spans stable coins, tokenization, and digital infrastructure. The focus for investors is how to integrate this new asset class into modern portfolios with discipline and foresight.

GLOBAL UPDATE

Global yields:

Global yields remained relatively volatile in the month of September 2025. During the month, 10Y UST bonds eased by 7bps whereas 10Y JGB hardened by 5 bps & 10Y German bund closed flat in response to the respective countries domestic macro-economic data releases as well as Tariff related trade negotiations weighing heavily globally.

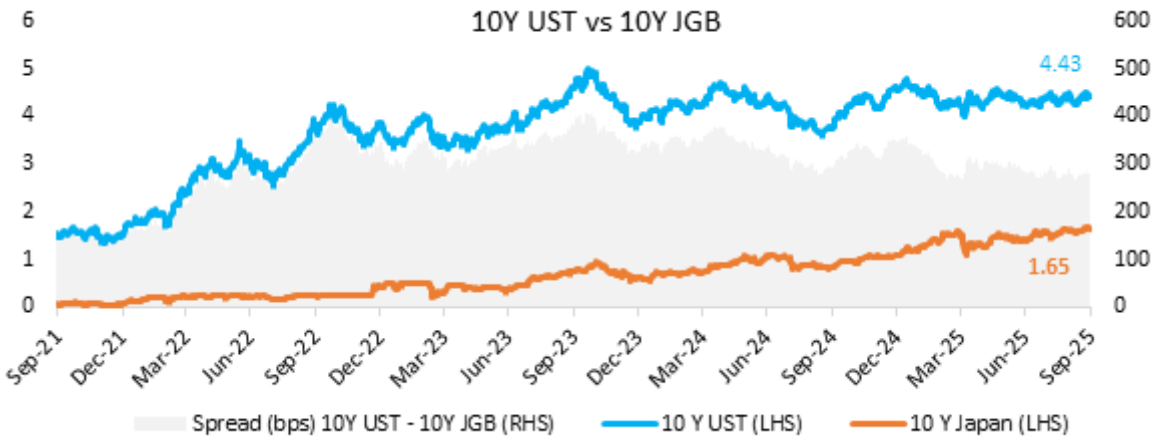

Source: Bloomberg, JMF MF Research | As per latest available data

US:

UST yield curve has witnessed bull steepening in CYTD 2025 with 2 year yields decreasing by 29 bps as FOMC rate cuts get priced in v/s 30 year increased by 18 bps with US fiscal deficit worries and US debt burden weighing on the longer end. Month of September 2025 witnessed weak labour market alongside decent growth numbers forcing FOMC to give a rate cut of 25 bps with reiteration of rate cut being a risk management cut. The yield curve flattened with rate cut expectations being front loaded in 2025 with dot plot median showing 75bps cut in 2025 and 25 bps in 2026 and 2027 each. (Source : Federal reserve bank)

Eurozone:

ECB maintained its benchmark interest rate at 2% stating resilience to US Tariffs, also acknowledging that disinflationary process is over and bar for further easing remains high.

Source: Bloomberg, JMF MF Research | As per latest available data

Japan:

BOJ held rates though with hike indicated by two dissents acknowledging strong Core CPI.

DOMESTIC UPDATE

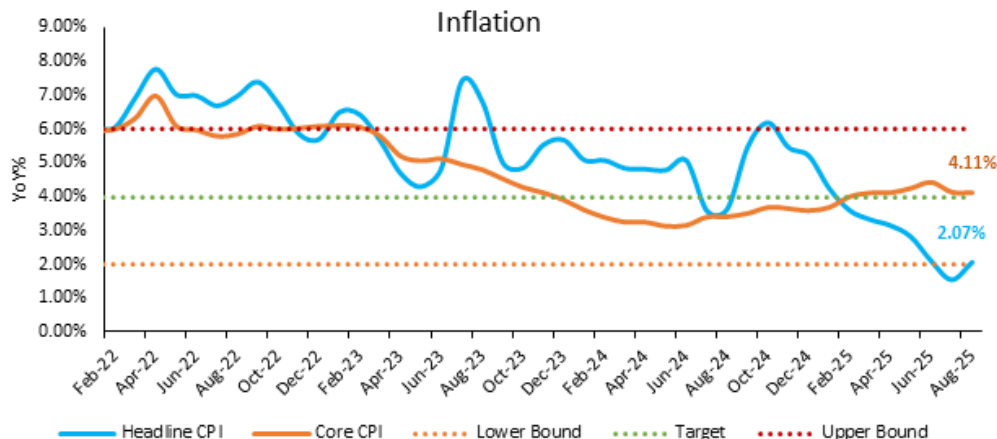

Bond and Money Markets:

Source: FBIL, Cogencis, JMF MF Research | As per latest available data

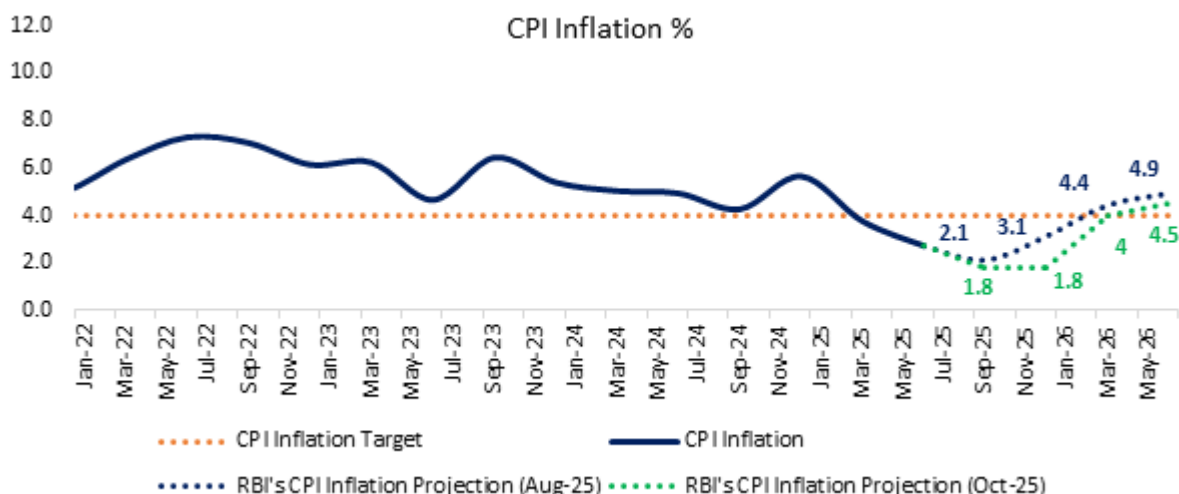

- The 10Y G-Sec traded in a band of 6.47%-6.58% and closed flat M-O-M at 6.58% in September 2025.
- The yield curve witnessed a downward shift with little flattening in the month of September 2025 with long bonds witnessing decent demand at attractive spreads whereas money market rates being driven by system liquidity squeezing at quarter end. Rates in 1-3 year witnessed demand due to dovish policy combined with rate cut expectations in October 2025. Market also took cues from volatile USD/INR which moved from closing of 88.20 of August 2025 to 88.79 in September 2025, the highest since more than six years. Lower end of the yield curve was mainly driven by average surplus liquidity of INR 3 Tn with regular RBI VRRR and VRR operations. The longer end of the curve saw some buying by insurances and pension funds at attractive spreads.
- At Primary auctions, yields of 91 Day T-Bill, 182 Day T-Bill & 364 T-Bill softened by ~3 bps, ~2 bps & ~3 bps respectively.

CPI inflation continues to be at the lower end of the inflation target:

Source: MoSPI, CMIE, JMF MF Research | As per latest available data

- Consumer Price Index (CPI) inflation stood at 2.07% in August 2025, the lowest reading in 8 years.
- The reading also came in lower than the Bloomberg's median poll of 2.16%.
- Food and beverages remained relatively flat at 0.05% in August 2025 after two consecutive months of deflation. The inflation in food and beverages segment was led by (21.24%), fruits (11.65%) and non-alcoholic beverages (4.30%). On the other hand, vegetables (-15.92%), pulses and products (-14.53%) and spices (-3.24%) continued its deflationary trend.
- Core inflation has remained unchanged at 4.1% in August 2025 on a y-o-y basis.
- Over the last 3 months, the average sequential change in headline inflation stood at 0.69%, which is higher than the 6-month sequential change of 0.39% and the 12-month average of 0.17%.

Source: MoSPI, RBI, JMF MF Research | As per latest available data

- The central bank revised down its annual inflation projection for FY'26 to 2.6% from 3.1% in the October 2025 MPC meeting. Furthermore, the quarterly projections were also lowered for Q2 FY'26 to 1.8% (from 2.1% in August 2025 Policy), Q3 FY'26 to 1.8% (from 3.1% earlier), Q4 FY'26 to 4% (from 4.4% earlier), and Q1 FY'27 to 4.5% (from 4.9% earlier).

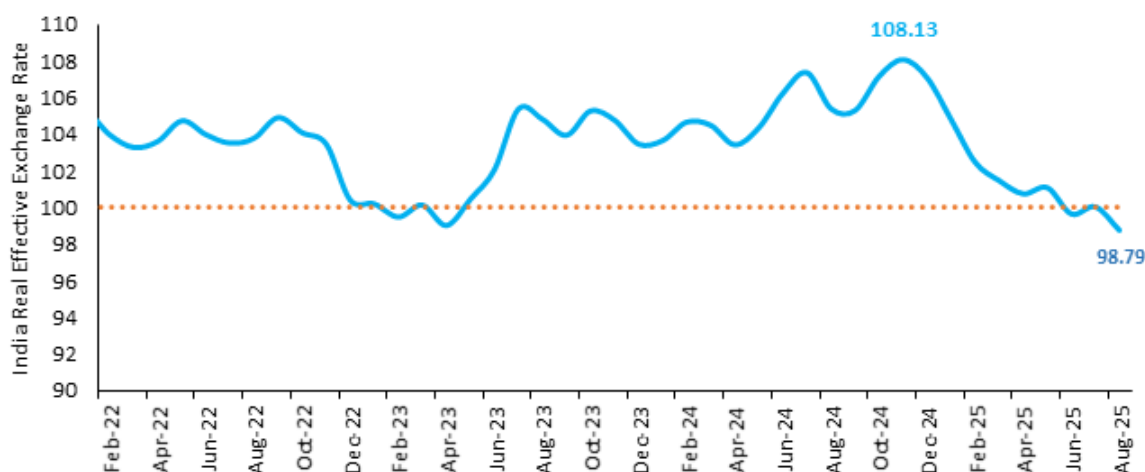

INR under pressure:

	USD/CNY	USD/INR	USD/JPY	EUR/USD	GBP/USD	DXY
31-Aug-25	7.13	88.21	147.05	1.17	1.35	97.77
30-Jun-25	7.16	85.75	144.03	1.18	1.37	96.88
30-Mar-25	7.26	85.46	149.84	1.08	1.29	104.04
30-Sep-24	7.02	83.80	143.63	1.11	1.34	100.78
01-Jan-25	7.30	85.65	157.24	1.04	1.25	108.49
30-Sep-25	7.12	88.79	147.90	1.17	1.34	97.78
	USD/CNY	USD/INR	USD/JPY	EUR/USD	GBP/USD	DXY
1M Depreciation (-)/Appreciation (+)	0.19%	-0.66%	-0.58%	0.41%	-0.43%	0.00%
3M Depreciation (-)/Appreciation (+)	0.62%	-3.54%	-2.69%	-0.45%	-2.08%	0.93%
6M Depreciation (-)/Appreciation (+)	1.97%	-3.89%	1.29%	8.37%	3.91%	-6.03%
1Y Depreciation (-)/Appreciation (+)	-1.43%	-5.95%	-2.97%	5.38%	0.53%	-2.98%
CYTD Depreciation (-)/Appreciation (+)	2.47%	-3.67%	5.94%	13.31%	7.42%	-9.87%

Source: Bloomberg, JMF MF Research | As per latest available data

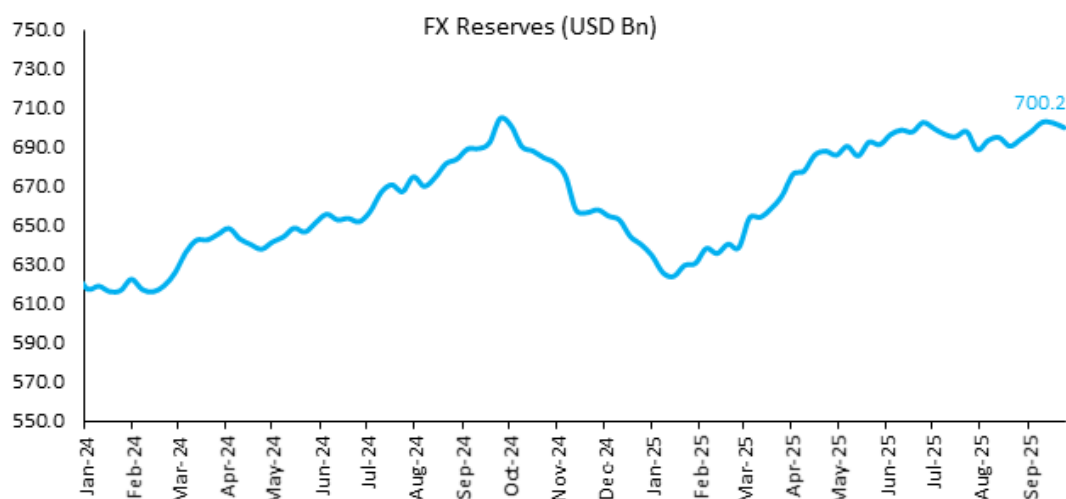

- During the month of September 2025, DXY remained unchanged from previous month levels as compared to an appreciation of 2.20% in August 2025. The DXY has strengthened on a 3-month basis. However, it continues to weaken on a long-term basis as the US levies tariffs on imports. Strength in Euro has weighed on the DXY. Euro has been appreciating as investors seek new havens during the current geopolitical turmoil. The evolving trade dynamics and a potential trade war can impact US growth adversely. Increase in US fiscal deficit on account of the recent tax cuts and a slowdown in economic growth can exert further pressure on the DXY.
- The INR witnessed a depreciation of 0.66% in September 2025. The currency traded in the range of Rs. 87.81-88.79/USD during the month and ended the month at an all-time low of Rs. 88.79/USD.

INR REER below 100-levels in 7 years

Source: Bloomberg, JMF MF Research | As per latest available data

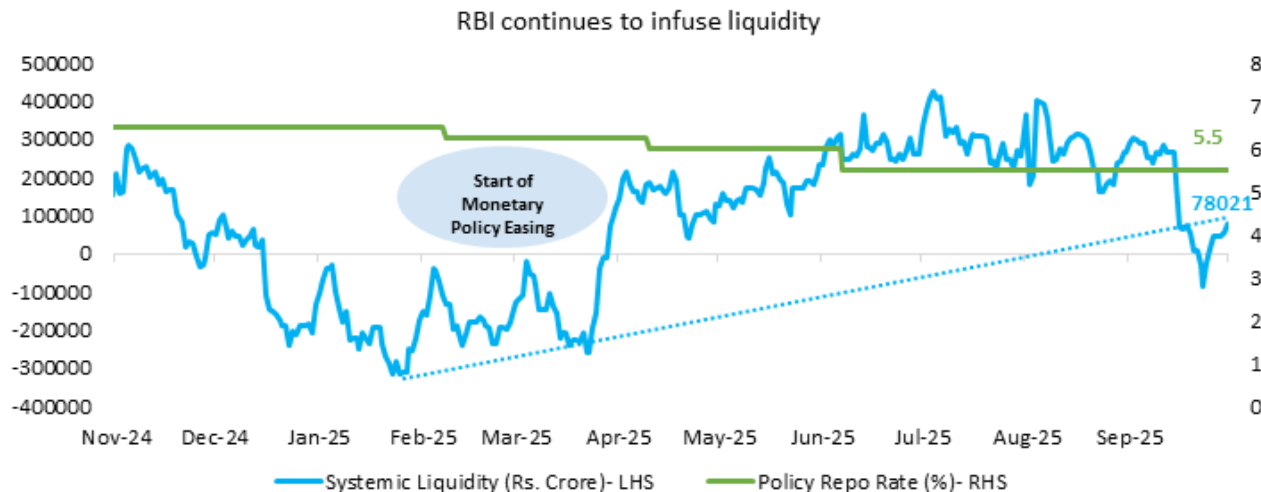

- In terms of the 40-currency Real Effective Exchange Rate (REER), INR is now undervalued (below 100), at a 7-year low of 98.79 after significantly coming down from its high in November 2024 (overvalued by 8.13%). Over the past 10 years, INR has been an overvalued by an average of 3.2%.
- In September 2025, FPIs were net sellers with a net outflow of USD 2.70 Bn from equity markets while debt markets observed a net inflow of USD 1.25 Bn during the month.

Source: CMIE, JMF MF Research | As per latest available data

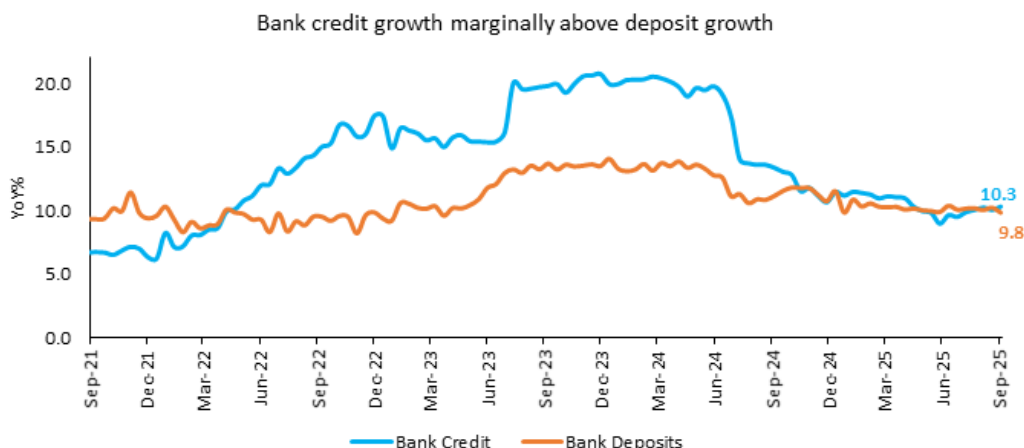

- FX reserves, after making a low in January 2025, have continued to remain adequate. FX reserves stood at USD 700.2 bn as on 26th September 2025, which is sufficient to cover more than 11 months of merchandise imports.

Systemic liquidity conditions continue to remain in surplus:

Source: RBI, JMF MF Research | As per latest available data

- In September 2025, systemic liquidity was briefly in deficit for the first time in this financial year largely due to the advance tax outflows, the GST outflows and the increase in Currency In Circulation (CIC). 25bps of CRR cut in September 2025, helped ease the liquidity pressures during the month to some extent.
- For the month of September 2025, average system liquidity has been in surplus of ~₹1.5 Tn per day, lower than the average daily surplus of ~₹2.70 Tn in August 2025.
- Since January 2025, RBI has taken active steps including Cash Reserve Ratio (CRR) cut, Open Market Operations (OMOs) purchases and USD/INR buy/sell swaps to infuse about Rs. 8.0 Tn worth of liquidity into the system.
- The remaining 75bps of CRR cut in October and November 2025 will further support liquidity conditions in the near term. This would infuse additional liquidity to the tune of Rs. 1.9 Lakh Crore by November 2025.
- Transmission of the previous 100bps of repo rate cut has been broad-based across sectors. The RBI endeavors to maintain sufficient liquidity surplus in the system for faster and smooth transmission of policy actions.

Source: RBI, JMF MF Research | As per latest available data

- In the fortnight ending August 05, 2025, bank credit grew by 10.3% on a year-on-year basis while bank deposits grew by 9.8%.
- On a FYTD basis, bank credit grew by 3.1% in FY'26 as compared to 3.7% during the same period in the previous year. On the other hand, deposit growth stayed at 4.8% as compared to 5.3% in the previous year. This suggests a sharper slowdown in credit growth as compared to deposit growth.
- Credit-Deposit Ratio stood at 79.4% in the fortnight ending September 05, 2025, slightly better than 79.3% in the previous fortnight ending August 22, 2025.

Our takeaways:

Global:

- While we expect Fed to deliver further cuts going ahead, we also believe Fed's actions are likely to be data driven
- While BoJ has kept rates unchanged in its recent policy, it is likely to continue its rate hike trajectory. The continuing unwinding of yen carry trades may affect US yields adversely.
- The impact of tariffs on growth may be seen with a lag of a few quarters. We may note that further rate cuts by FOMC may take place in case of a sustained deterioration in growth or if labor markets materially weaken.
- China's continuing sluggish economy has supported both from monetary and fiscal side to get its economy back on track. The resultant impact on commodity cycle upturn may be a development to be watchful of, especially for import dependent nations like India. During the month oil prices decreased and remained in the range of USD 65.52 to USD 68.85 per bbl.

Domestic:

- RBI continued to show consistent support to the economy through ample liquidity measures resulting in systemic liquidity surplus in the month of September 2025. Such support from RBI is expected to continue to increase monetary transmission of rate cuts.
- The RBI Governors dovish comments post the latest monetary policy (1st October 2025) have led to a build-up of rate cut expectations in the coming policies. The coming months may see bond markets also react to prospective CRR cut linked inflows, FPI flows into bond markets, evolving GST reform related events and global cues such as UST rates, FOMC rate actions, crude oil prices and other geopolitical factors.
- Given the ample liquidity conditions, expected CRR cut linked inflows and a benign inflation projection, we may see bond participants continue to robustly participate at the shorter end of the curve.

FIXED INCOME MARKET OUTLOOK

Details as on September 30, 2025

Current Scheme Positioning:

We have remained at the higher end of the mandated duration across our portfolios and shifted towards selective carry assets given the positives mentioned above. In addition, we look to add duration on dips as further easing of interest rates are expected.

JM Liquid Fund

The Scheme continues to focus on enhancing accruals while aiming to keep appropriate mix of liquid and semi liquid money market assets.

JM Low Duration Fund

The Scheme aims to generate optimum risk adjusted returns in the current interest rate scenario. The Scheme has been deploying cash in securities between 6 months to 3 years to maintain an appropriate blend of accruals and duration in the portfolio. Overall, the scheme has invested in corporate bonds up to 3-year bucket to improve the accrual of the portfolio.

JM Short Duration Fund

The Scheme has reduced duration to ~2.25 years through a mix of government securities and AAA rated corporate bonds remaining within our internal guard rails (No exposure in non-AAA and no security > 5yr duration). The Scheme would continue to evaluate the macros to manage duration actively and maintain appropriate mix of asset class based on relative valuation to ensure optimum carry of the portfolio predominantly through 1-5 years AAA rated/Sovereign assets. We expect a continued steepening bias in the shape of the yield curve; hence, the scheme approach is likely expected to deliver better performance.

JM Dynamic Bond Fund

The Scheme has strategically reduced its duration, given the current position of the interest rate cycle. The Scheme endeavours to assess the risk-reward parameters on a continuous basis and would actively manage duration in accordance with its mandate as the macros may require tweaking duration stance frequently.

JM Medium to Long Duration Fund

The Scheme has strategically pulled back its duration towards the lower end of the regulatory framework (SEBI mandate 4-7 years). The Scheme endeavours to assess the risk-reward parameters on a continuous basis and would actively manage duration in accordance with its mandate.

The above mentioned approach might change depending upon market conditions and Fund Managers views, but will be within the limits of the Scheme Information Document. Source: Bloomberg, Cogencis, RBI, Reuters, Refinitiv, investing.com, tradingeconomics.com

Past performance may or may not be sustained in future and the same may not necessarily provide the basis for comparison with other investment.

JM Short Duration Fund

An open-ended short duration debt scheme investing in instruments such that the Macaulay duration⁵ of the portfolio is between 1 year and 3 years. A moderate interest rate risk and moderate credit risk. Refer - \$ concept of Macaulay Duration.

Details as on September 30, 2025

FUND MANAGERS VIEW

The Scheme has reduced duration to ~2.25 years through a mix of government securities and AAA rated corporate bonds remaining within our internal guard rails (No exposure in non-AAA and no security > 5yr duration). The Scheme would continue to evaluate the macros to manage duration actively and maintain appropriate mix of asset class based on relative valuation to ensure optimum carry of the portfolio predominantly through 1-5 years AAA rated/Sovereign assets. We expect a continued steepening bias in the shape of the yield curve; hence, the scheme approach is expected to deliver better performance.

The aforementioned points do not indicate details as on any specific date. These are internal parameters set by JM Financial Asset Management Ltd for the purpose of managing this Scheme and may change anytime without prior intimation.

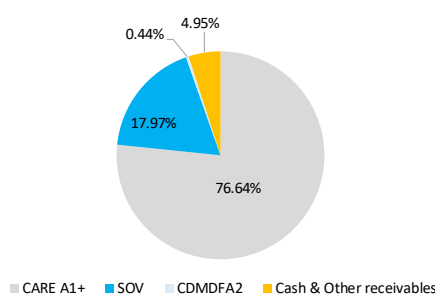

INVESTMENT OBJECTIVE

The Scheme will endeavor to generate stable returns with a low risk strategy while maintaining liquidity through a portfolio comprising of debt and money market instruments. Investors are required to read all the scheme related information carefully and also note that there can be no assurance that the investment objectives of the scheme will be realized. The scheme does not guarantee/ indicate any returns.

For Additional Performance Note, refer page no. 39.

\$ Concept of Macaulay Duration: The Macaulay duration (named after Frederick Macaulay, an economist who developed the concept in 1938) is a measure of a bond's sensitivity to interest rate changes. Duration tells investors the length of time, in years, that it will take a bond's cash flows to repay the investor the price he or she has paid for the bond. Fixed income securities with higher duration have higher interest rate sensitivity i.e. the changes in price of higher duration bonds are higher as compared to lower duration ones. A zero coupon bond is one which does not pay any interest and all payments are received at maturity. For a zero coupon bond, the duration is same as residual maturity.

Formula: There is more than one way to calculate duration, but the Macaulay duration is the most common. The formula is:

$$\text{Macaulay Duration} = \frac{\sum_{t=1}^n \left(\frac{tC}{(1+y)^t} + \frac{nM}{(1+y)^n} \right)}{P}$$

where: t = period in which the coupon is received, C = periodic (usually semiannual) coupon payment, y = the periodic yield to maturity or required yield, n = number periods, M = maturity value (in ₹), P = market price of bond

Notes: Duration is quoted in "years." If a bond has a semi-annual period, we convert duration to years before quoting it (a duration of 8 semi-annual periods is 4 years). Duration is a measure of interest-rate risk. Or, stated differently, duration is a measure of how sensitive the price of a fixed-income instrument is to interest-rate changes. When we say, "The duration of the bond is 4 years," we mean: "If the interest rate on the bond goes up by 1%, the bond's price will decline by 4%."

JM Dynamic Bond Fund

An open ended dynamic debt scheme investing across duration. A relatively high interest rate risk and moderate credit risk.

Details as on September 30, 2025

FUND MANAGERS VIEW

The Scheme has strategically reduced its duration, given the current position of the interest rate cycle. The Scheme endeavours to assess the risk-reward parameters on a continuous basis and would actively manage duration in accordance with its mandate as the macros may require tweaking duration stance frequently.

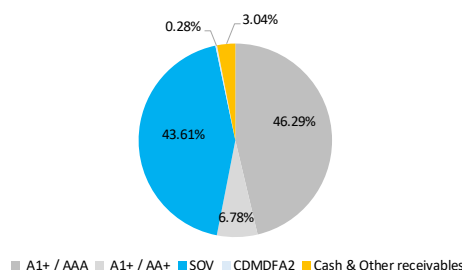

INVESTMENT OBJECTIVE

The investment objective will be to actively manage a portfolio of good quality debt as well as Money Market Instruments so as to provide reasonable returns and liquidity to the Unit holders. Investors are required to read all the scheme related information carefully and also note that there can be no assurance that the investment objectives of the scheme will be realized. The scheme does not guarantee/ indicate any returns.

JM Low Duration Fund

An open ended low duration debt scheme investing in instruments such that the Macaulay duration⁵ of the portfolio is between 6 to 12 months. A relatively low interest rate risk and moderate credit risk. Refer - \$ concept of Macaulay Duration.

Details as on September 30, 2025

FUND MANAGERS VIEW

The Scheme aims to generate optimum risk adjusted returns in the current interest rate scenario. The Scheme has been deploying cash in securities between 6 months to 3 years to maintain an appropriate blend of accruals and duration in the portfolio. Overall, the scheme has invested in corporate bonds up to 3-year bucket to improve the accrual of the portfolio.

INVESTMENT OBJECTIVE

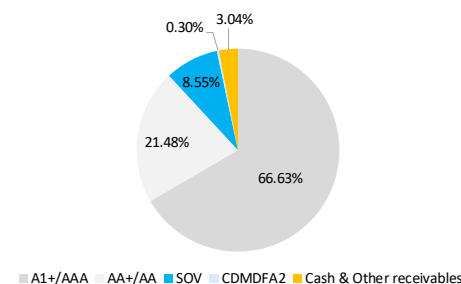

To generate stable long term returns with low risk strategy and capital appreciation/accretion besides preservation of capital through investments in Debt & Money Market instruments such that the Macaulay duration⁵ of the portfolio is between 6 months - 12 months. Investors are required to read all the scheme related information carefully and also note that there can be no assurance that the investment objectives of the scheme will be realized. The scheme does not guarantee/ indicate any returns.

\$ Concept of Macaulay Duration: The Macaulay duration (named after Frederick Macaulay, an economist who developed the concept in 1938) is a measure of a bond's sensitivity to interest rate changes. Duration tells investors the length of time, in years, that it will take a bond's cash flows to repay the investor the price he or she has paid for the bond. Fixed income securities with higher duration have higher interest rate sensitivity i.e. the changes in price of higher duration bonds are higher as compared to lower duration ones. A zero coupon bond is one which does not pay any interest and all payments are received at maturity. For a zero coupon bond, the duration is same as residual maturity. **Formula:** There is more than one way to calculate duration, but the Macaulay duration is the most common. The formula is:

$$\text{Macaulay Duration} = \frac{\sum_{t=1}^n \left(\frac{tC}{(1+y)^t} + \frac{nM}{(1+y)^n} \right)}{P}$$

where: t = period in which the coupon is received, C = periodic (usually semiannual) coupon payment, y = the periodic yield to maturity or required yield, n = number periods, M = maturity value (in ₹), P = market price of bond

Notes: Duration is quoted in "years." If a bond has a semi-annual period, we convert duration to years before quoting it (a duration of 8 semi-annual periods is 4 years). Duration is a measure of interest-rate risk. Or, stated differently, duration is a measure of how sensitive the price of a fixed-income instrument is to interest-rate changes. When we say, "The duration of the bond is 4 years," we mean: "If the interest rate on the bond goes up by 1%, the bond's price will decline by 4%."

JM Medium to Long Duration Fund

An open ended medium term debt scheme investing in instruments such that the Macaulay duration⁵ of the portfolio is between 4 years to 7 years. A relatively high interest rate risk and moderate credit risk. Refer - \$ concept of Macaulay Duration.

Details as on September 30, 2025

FUND MANAGERS VIEW

The Scheme has strategically pulled back its duration towards the lower end of the regulatory framework (SEBI mandate 4-7 years). The Scheme endeavours to assess the risk-reward parameters on a continuous basis and would actively manage duration in accordance with its mandate.

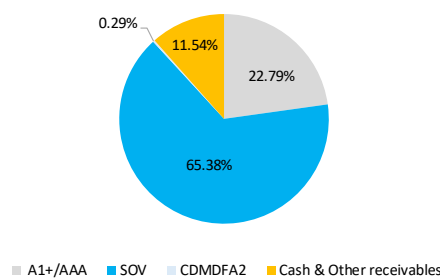

INVESTMENT OBJECTIVE

To generate stable long term returns with low risk strategy and capital appreciation/accretion through investment in debt instruments and related securities besides preservation of capital. Investors are required to read all the scheme related information carefully and also note that there can be no assurance that the investment objectives of the scheme will be realized. The scheme do not guarantee/ indicate any returns.

JM EQUITY SCHEMES AT A GLANCE

Details as on September 30, 2025

No Entry Load and treatment of Exit Load.

In accordance with the requirements specified by the Paragraph 10.4 of SEBI Master Circular for Mutual Funds dated June 27, 2024 ("Master Circular"), no entry load is being charged for fresh purchase / additional purchase / switch-in transactions accepted by the Fund with effect from August 1, 2009. Similarly, no entry load is being charged with respect to applications for fresh registrations under Systematic Investment Plan/Systematic Transfer Plan accepted by the Fund with effect from August 1, 2009.

Also, in compliance with Paragraph 10.4 of SEBI Master Circular, parity among all classes of unit holders in terms of charging exit load is made applicable at the portfolio level with effect from August 24, 2009.

Load Structure:

Entry Load: NIL for all Open-ended Equity Schemes.

Exit Load: As mentioned in the table hereunder:

Sr. no.	Schemes	Inception Date	Minimun Purchase	Additional Purchase	Exit Load @@@	Lock-in Periods @@@	Redemption Time#
1	JM Arbitrage Fund	July 18, 2006	₹ 1000/- and in multiples of ₹ 1 thereafter.	₹ 100/- and in multiples of ₹ 1 thereafter.	0.50%	30 Days	T+2 Business Days
2	JM Aggressive Hybrid Fund	April 1, 1995			1.00%	60 Days	T+2 Business Days
3	JM Value Fund	June 2, 1997			1.00%	30 Days	T+2 Business Days
4	JM Focused Fund	March 5, 2008			1.00%	30 Days	T+2 Business Days
5	JM Large Cap Fund	April 1,1995			1.00%	30 Days	T+2 Business Days
6	JM Flexicap Fund	September 23, 2008			1.00%	30 Days	T+2 Business Days
7	JM Midcap Fund	November 21, 2022			1.00%	180 days	T+2 Business Days
8	JM Small Cap Fund	June 18, 2024			1.00%	180 days	T+2 Business Days
9	JM Large & Mid Cap Fund	July 25, 2025			1.00%	180 days	T+2 Business Days
10	JM ELSS Tax Saver Fund	March 31, 2008	Rs. 500/- or in multiples of Rs. 500/- each		NIL	&&	T+2 Business Days

&& JM ELSS Tax Saver Fund :- The scheme falls in the ELSS category and is eligible for tax benefits under section 80C of Income Tax Act. There is a lock-in period of 3 years under the Scheme.

AMC would adhere to the aforesaid service standards for redemption payments on best efforts basis under normal circumstances subject to the overall 3 business days as stipulated by SEBI. The redemption payout may be deferred in line with the settlement cycle/s of the stock market and/or money market in case of intervening Bank holiday/s in Mumbai.

@@@ The exit load shown in the above table are applicable for allotment of units for investment made through fresh purchases/switch-in/shift-in or through respective SIP/STP/SWP Instalments out of the fresh registration effected during the period when above exit load rates are applicable. The exit load are subject to change at any time. Hence, all Investors are advised to check the current exit load from the nearest Investor Service Center before investment.

Minimum criteria for Redemption/Switch-outs

There is no minimum criteria for any number of units.

However, in case of switch transaction, the minimum investment provisions of the switch-in scheme/plan i.e. for fresh/additional purchase, shall continue to be applicable. In the event of failure to meet the requirement of switch-in scheme/plan, such switch requests will be treated as cancelled/rejected.

In case of Equity Schemes (except JM ELSS Tax Saver Fund), if an investor fails to specify his preference of Option or in case of any ambiguity in the Transaction Slip/ Application Form about the desired Option, the default option would be the Growth Option. In case, an investor specifies his preference to IDCW option and/or fails to specify his preference of sub-option, the default option would be the IDCW Option of the scheme and the default sub-option will be reinvestment.

In case, the investor mentions the word "Direct" on any part of the application/transaction-slip, default Plan will be considered as Direct Plan.

Load structure :

A) Exit load on intra-scheme redemptions/switch outs :

The applicable exit load, if any, will be charged for redemptions/ switch outs of the scheme (i.e. at portfolio level) before the completion of the stipulated load/ lock-in period. The stipulated load/ lock-in period will be reckoned from the date of allotment of units for a particular transaction in the scheme (i.e. at portfolio level) till the date of redemption / switch out from that scheme (at Portfolio Level), irrespective of the number of intra-scheme switches by the investor between the aforementioned two dates (e.g. switches between plans/sub-plans/options/sub-options within the scheme having the same portfolio). The extant provisions of applicability of load on redemptions/ switches from one Scheme to another will continue to be applicable subject to the exemption mentioned in below mentioned para.

B) In case of Intra & Inter equity switches: (including SIP/STP):

No exit load for inter and intra equity switches except in case of (i) switches by SIP/STP investors within 24 months (for cases registered from 4.1.2008 up to 2.10.2008) and within 12 months (for cases registered upto 3.1.2008) of respective SIP/STP installments (ii) switches by STP investors (for cases registered w.e.f. 3.10.2008) within 24 months of respective STP installments (iii) switches by SIP investors (for cases registered w.e.f. 3.10.2008) within 12 months of respective SIP installments (iv) switches to / from JM Arbitrage Fund to any equity schemes.

However, Government levies eg. STT (wherever applicable) will continue to be deducted for every intra-scheme and inter-scheme switch-out/redemption transactions under A) & B) above.

IDCW i.e Income Distribution cum Capital Withdrawal is the new name for Dividend as per recent SEBI Guidelines. The investors may read and decipher accordingly.

The above details are subject to provisions laid down in the respective Scheme Information Documents, Statement of Additional Information for all schemes and Addenda issued from time to time.

JM DEBT SCHEMES AT A GLANCE

Details as on September 30, 2025

Load Structure:

Entry Load: NIL for all Open-ended Debt & Liquid Schemes.

Exit Load: As mentioned in the table hereunder:

Sr. no.	Category of Scheme	Schemes	Minimum Purchase	Additional Purchase	Exit Load @@@	Lock-in Periods @@@	Redemption Time#
1	Liquid	JM Liquid Fund	₹ 1000/- and in multiples of ₹1 thereafter.	₹ 100/- and in multiples of ₹1 thereafter.	Refer Note below	NA	T+1 Business Day
2	Overnight	JM Overnight Fund			NIL	NA	T+1 Business Day
3	Debt	JM Dynamic Bond Fund			NIL	NA	T+1 Business Day
4		JM Medium to Long Duration Fund			NIL	NA	T+1 Business Day
5		JM Low Duration Fund			NIL	NA	T+1 Business Day
6		JM Short Duration Fund			NIL	NA	T+1 Business Day

AMC would adhere to the aforesaid service standards for redemption payments on best efforts basis under normal circumstances subject to the overall 3 business days as stipulated by SEBI. The redemption payout may be deferred in line with the settlement cycle/s of the stock market and/or money market in case of intervening Bank holiday/s in Mumbai.

@@@ The exit load shown in the above table are applicable for allotment of units for investment made through fresh purchases/switch-in/shift-in or through respective SIP/STP/SWP Instalments out of the fresh registration effected during the period when above exit load rates are applicable. The exit load are subject to change at any time. Hence, all Investors are advised to check the current exit load from the nearest Investor Service Center before investment.

In case of debt and liquid schemes (except JM Medium to Long Duration Fund), if an investor fails to specify his preference of Option or in case of ambiguity in the Transaction Slip/ Application Form about the desired Option, the default option would be Daily IDCW Option and the Default Sub-Option would Reinvestment. In case of JM Medium to Long Duration Fund, the default option would be the Growth Option and the default sub option would be Reinvestment. In case, the investor mentions the word "Direct" on any part of the application/transaction-slip, the default Plan will be the Direct Plan.

In case of purchase transactions, where there is a mismatch in the amount on the Transaction Slip / Application Form and the payment instrument / credit is realised /received, the AMC may at its discretion allot the units for the lesser of the two amount and refund / utilize the excess amount, if any, for any other transaction submitted by the same investor, subject to the fulfillment of other regulatory requirements for the fresh transaction in the respective scheme.

In case, the investor does not mention the name of the Plan/ Option/ Sub-option/or wherever there is an ambiguity in choice of Plan/ Option/ Sub-option opted for purchase/ switch application(s), the AMC/ Registrar may allot the units as per default Plans/ Options/ Sub-options, if no clarificatory letter is provided by the investor on the transaction date. However, in case of fresh purchase application, the AMC/ Registrar at its discretion may allot the units based on the Plan/ Option/ Sub-option appearing on the respective payment instrument.

Note: Levy of exit load in JM Liquid Fund. Following exit load structure is applicable under JM Liquid Fund as per SEBI guidelines.

Existing exit load structure	Investor's exit upon subscription	Revised Exit Load Structure
NIL	Day 1	0.0070%
	Day 2	0.0065%
	Day 3	0.0060%
	Day 4	0.0055%
	Day 5	0.0050%
	Day 6	0.0045%
	Day 7 onwards	0.0000%

The above exit load is applicable for allotment of units for investment made through fresh purchase / switch-in from other Schemes or for SIP/STP/SWP instalments falling due on or after the above mentioned effective date, irrespective of the date of registration.

Cut-off timings for the applicability of NAV in JM Liquid Fund and JM Overnight Fund

Pursuant to Paragraph 8.4.5 of SEBI Master Circular, the cut-off timings for applicability of Net Asset Value (NAV) in respect of purchase of units in JM Liquid Fund and JM Overnight Fund is 1:30 p.m. for all the purchase applications time-stamped w.e.f. October 20, 2019 subject to the receipt of credit of respective funds into the scheme's account before the above mentioned stipulated cut off time.

Nifty Midcap 150 TRI, ## Nifty 50 TRI.

NA: Not Available. Source: MFI Explorer. **Past performance may or may not be sustained in future and the same may not necessarily provide the basis for comparison with other investment.** Since Inception Date = Date of First allotment in the Scheme / Plan. Returns greater than 1 year period are compounded annualized (CAGR). The performance details provided herein are of Direct Plan. For Inception date of the Schemes kindly refer to the details mentioned elsewhere in the document. The returns are not computed for JM Large & Mid Cap Fund since the scheme has not completed six months of performance from its inception.

Note:

- Following are the Fund Managers of the Equity Schemes.

Name of the Scheme	Fund Manager	Co-Fund Managers	Debt Portion
JM Arbitrage Fund	Mr. Asit Bhandarkar	Mr. Satish Ramanathan & Mr. Deepak Gupta	
JM Focused Fund	Mr. Asit Bhandarkar	Mr. Satish Ramanathan & Mr. Deepak Gupta	
JM Large Cap Fund	Mr. Deepak Gupta	Mr. Asit Bhandarkar & Mr. Satish Ramanathan	
JM Midcap Fund	Mr. Satish Ramanathan	Mr. Asit Bhandarkar & Mr. Deepak Gupta	
JM Small Cap Fund	Mr. Asit Bhandarkar	Mr. Satish Ramanathan & Mr. Deepak Gupta	
JM Large & Mid Cap Fund	Mr. Asit Bhandarkar	Mr. Deepak Gupta	
JM ELSS Tax Saver Fund	Mr. Deepak Gupta	Mr. Satish Ramanathan & Mr. Asit Bhandarkar	
JM Aggressive Hybrid Fund	Mr. Asit Bhandarkar	Mr. Satish Ramanathan & Mr. Deepak Gupta	
JM Flexicap Fund	Mr. Satish Ramanathan	Mr. Asit Bhandarkar & Mr. Deepak Gupta	
JM Value Fund	Mr. Satish Ramanathan	Mr. Asit Bhandarkar & Mr. Deepak Gupta	

- Mr. Satish Ramanathan manages 9 schemes. Mr. Asit Bhandarkar and Mr. Deepak Gupta jointly manages 10 Schemes. Ms. Ruchi Fozdar manages 6 schemes and debt portion of all the Equity Schemes of the Mutual Fund.
- Since Inception Date = Date of First allotment in the Scheme / Plan. Period for which scheme's performance has been provided is computed on the basis of the last business day of the month.
- Different plan shall have a different expense structure.
- Load is not considered for computation of returns.
- In case the TRI values are not available for a particular period, a composite CAGR figure of the performance of the PRI benchmark (till the date from which TRI is available) and the TRI (subsequently) is used to compare the performance of the scheme.
- Returns greater than 1 year period are compounded annualized (CAGR).

@ Additional Performance Note:

- Different plans shall have a different expense structure. The performance details have been provided for Regular Plan and Direct Plan separately.
- Returns are Compounded Annualised Growth Rate Returns, with reinvestment of IDCW, if any, unless otherwise mentioned.
- In cases where there has been a change in the benchmark indices of the existing Schemes, the current benchmark has been used for calculating the returns since inception.
- Returns of benchmark indices since inception date of the Schemes are not available in some cases as the benchmark indices were launched / changed subsequent to the inception date of the Scheme(s).
- For the purpose of calculating returns, inception date is deemed to be the date of allotment of the units.
- In plans/options/sub-options, where there were no units on the date of inception, the first NAV has been considered when units were allotted consequently.
- The Direct Plans of the Schemes were launched in January, 2013. The returns since inception for these plans have been considered accordingly.

NA: Not Available. Source: MFI Explorer. Assuming ₹ 10,000 invested systematically on the first Business Day of every month over a period of time. CAGR returns are computed after accounting for the cash flow by using XIRR method (investment internal rate of return). Load is not taken into consideration for computation of performance. The above investment should not be construed as a promise on minimum returns and safeguard of capital. The AMC / Mutual Fund is not guaranteeing or promising or forecasting any returns. SIP does not assure a profit or guarantee protection against a loss in a declining market. Since Overnight/Liquid Funds are meant for parking short term funds, SIP Performance details are not provided, which as a facility is long term in nature. Since Inception Date = Date of First allotment in the Scheme / Plan. The returns are provided for both the Regular and Direct plans. SIP Performance of benchmark indices since inception date of the Schemes are not available in some cases as the benchmark indices were launched / changed subsequent to the inception date of the Scheme(s). The returns are not computed for JM Large & Mid Cap Fund since the scheme has not completed six months of performance from its inception.

RISK-O-METER (EQUITY SCHEMES)

Details as on September 30, 2025

NOTICE CUM ADDENDUM

Details as on September 30, 2025

NOTICE-CUM-ADDENDUM TO THE STATEMENT OF ADDITIONAL INFORMATION ("SAI"), SCHEME INFORMATION DOCUMENT ("SID") & KEY INFORMATION MEMORANDUM ("KIM") OF THE SCHEMES OF JM FINANCIAL MUTUAL FUND ("THE MUTUAL FUND").

Additional Official Point of Acceptance for Transactions through Cybrilla platform

Investors are hereby informed that the Schemes of the Mutual Fund will be available for transactions on the Open Network for Digital Commerce ("ONDC Network") w.e.f. September 03, 2025. To facilitate the transactions through the ONDC Network, the Mutual Fund has appointed Cybrilla as the service provider to provide the backend platform for this ONDC Network. This platform provided by Cybrilla would act as an Official Point of Acceptance for the Schemes of the Mutual Fund.

Accordingly, transactions such as Subscription/ Redemption/ Switch/ Systematic Registrations such as SIP, STP, etc. in all the Schemes of the Mutual Fund and non-financial transactions can be undertaken through this platform on the ONDC Network, subject to applicable terms & conditions as may be communicated from time to time.

JM Financial Asset Management Limited reserves the right to introduce, change, modify and/or withdraw all or any of the features available in this facility from time to time.

This Notice-cum-Addendum forms an integral part of SID & KIM of the Schemes and SAI of the Mutual Fund, as amended from time to time.

All the other terms and conditions of the SID & KIM of the Schemes and SAI of the Mutual Fund will remain unchanged.

DATE : SEPTEMBER 02, 2025

REF No. 29/2025-26

NOTICE-CUM-ADDENDUM TO THE STATEMENT OF ADDITIONAL INFORMATION ("SAI"), SCHEME INFORMATION DOCUMENT ("SID") & KEY INFORMATION MEMORANDUM ("KIM") OF THE SCHEMES OF JM FINANCIAL MUTUAL FUND ("THE MUTUAL FUND").

Change in Timeline for registering of a Systematic Transfer Plan ("STP")

Investors are hereby informed that the timeline for registering a Systematic Transfer Plan ("STP") will be reduced from the existing 7 calendar days to 2 calendar days (in case of offline mode) with effect from **September 08, 2025**.

This revision will be for all the Scheme(s) of the Mutual Fund. All other terms and conditions of the STP facility will remain unchanged.

This Notice-Cum-Addendum forms an integral part of SID & KIM of all the Schemes and SAI of the Mutual Fund, as amended from time to time.

All other terms and conditions of the SID & KIM of all the Schemes and SAI of the Mutual Fund will remain unchanged.
