Gold, Natural gas, S.Korea topped returns in Sep. (% m/m, in USD)

Gold prices soared during the month, largely on the back of a dovish US Fed and projections of a series of rate cuts into the quarters ahead. Natural gas prices on the other hand moved higher on easing output and lower than expected storage builds. South Korean equities rose on a boost to its chip sectors on AI related developments.

After a muted Jackson Hole meeting, markets had all their eyes on labour market data that was seen much weaker than expectations. Apart from lower monthly non-farm payroll numbers, the job additions data series were revised sharply lower for the 12M ending Mar'26. This was the largest downward revision since 2000, halving the average monthly pace of job additions to 70k, from 147k. The Fed policy that followed witnessed an appreciable dovish shift, delivering a 25bps rate cut. The Fed policy also projected 50bps more of cuts in 2025 and up to 100bps of cuts in 2026. In addition to calling it a "risk management cut", the Fed Chair mentioned that the Fed was willing to accept more inflation risk to prevent deeper labour market cracks. Markets got just what they were looking for. While the month was largely dominated by market reaction to the Fed, end-September witnessed tariff narratives around pharmaceuticals and tariff proposals mulled on chips. The month ended with a US shutdown that continued well into the first week of October, with no deal in sight. This posed a peculiar problem for markets as the US shutdown led to all US economic data releases to be suspended. This meant US non-farm payroll data had not been released in early October, with the Fed's monetary policy set for 9th Oct'25. Early October saw markets are now pricing in a 92% probability of a 25bps Fed rate cut on the 9th and an 86% probability of another 25bps rate cut in Dec'25.

PSU Banks, Metals and Auto top O/P in September (% m/m)

NIFTY grew marginally by 0.8% in rupee terms for the month of September. PSU Banks, Metals and Auto were the key outperformers, while IT, Media and FMCG were the top drags. On cap curves, Small caps topped, followed by Mid caps, the broad BSE500 index and finally the NIFTY, in that order of performance. FII remained net sellers with \$(2.1)bn of outflows, while debt investment remained in the positive, at \$1.2bn, marginally below August's inflow.

August started with a key reform around GST rate rationalisation. The Centre announced details of the simplified 2-slab structure: 5% merit and 18% standard, alongside a 40% on demerit goods. This was implemented from 22nd Sep'25, except for the pan masala, cigarettes, gutka, etc.. GST is fully exempt on life and health insurance policies, making it more affordable. Lifesaving drugs, medicines and medical devices/supplies' rates were slashed to 0-5%, lower rates for agriculture, fertilizers, MSMEs, textiles, renewables, transport, labour-intensive industries and household consumer items. Cuts were also seen for small cars and renewable energy devices. The cost of the reform is expected to be largely manageable for the Centre, but is expected to exert some pressure on State finances due to the ending of Compensation cess this fiscal. The month also witnessed a brief scare with US steeply increasing the visa fees for H-1B work visas. However, US announced finer details that greatly reduced the market concerns, as the new fees were applicable only to new applications for the next cycle in 2026 and only as a one-time fee. Macro data continued to reflect resilience, with better than expected current account deficit numbers and short frequency indicators continuing to hold-up, amidst uncertainties.

Manufacturing and Services PMI numbers moderate in September

Excess dom. liquidity contracted sharply during Sep. (Rs.Bn)

India Composite PMI numbers saw moderation in September. However, the PMI numbers remain elevated, being the second-highest in over two years. Manufacturing PMIs saw new order expansion moderate to a 4M low, but demand remained robust. Job creation eased to a 1Y low, and input costs registered an increase. Business confidence however strengthened to a 7M high with the GST reform. Services PMIs, despite moderation, remained close to its August peak.

India's trade balances with top 20 countries (USD Bn., 2024 data)

Amidst the US-India trade and tariff tensions, a peculiar question was heard in market narratives.

Can India shift its US exports to China and Russia? Before one gets to answer that question, we need to examine country rankings based on total trade (exports + imports), where US ranks first, followed by China. US and China are like chalk-and-cheese. Trade with the US gives India the largest trade surplus, while that with China, gives India the largest trade deficit. After India's \$40bn+ trade surplus with the US, Netherlands (\$7bn) and the UK (\$5bn) come next in order of India's trade surplus magnitude. Given the increasing risks around India's exports to the US, a logical question that follows is if India can shift its exports from the US to other countries. The answer to that question is much more complicated than perceived, and lies in myriad variables, including politics, strategy, cost competitiveness, scale etc... However, one can attempt to answer this question based on what other countries import from the world and also what the US imports from China.

Can India step-up and export more goods to China and Russia? Of the \$3.3tr of US imports from the world, <3% of imports come from India. China's imports from India stand at 0.7% of its total imports, much lower than the US. And Russia's imports from India stand at 2.1% of Russia's total imports from the world.

Outlook from Equity Desk

Growth remains the key differentiating factor for India within emerging markets. With significant fiscal and monetary stimuli being rolled out in the form of direct and indirect taxation changes, interest rate-cuts and easing monetary conditions, seeds for improved growth and earnings cycle are being sown. The policy pivot is unambiguously leaning towards growth and the consequent impact on demand stimulation should partly help mitigate impact of US tariffs on the economy. Over the medium-term these measures should aid in catalysing private capex as confidence on domestic growth improves. Corporate leverage remains at multi-year lows providing sufficient headroom to access growth capital to invest behind growth opportunities or add further capabilities to drive value addition.

Domestic banking liquidity witnessed a sharp drop during the month, seen largely to be due to GST payments. However, this eased into the end of the month and is expected to improve further into the weeks ahead, as the RBI's CRR cuts come into effect. Note here that RBI announced CRR cuts of 100bps, with 25bps starting early Sep'25, followed by equal instalments in early Oct'25, early Nov'25 and late Nov'25 respectively.

Can India export more to the countries? China's world imports are largely electrical imports (high-tech), followed by energy, soyabean, and automobiles. These are all areas where India currently does not offer much in value & more importantly, scale. Russia's world imports are different. They focus on importing manufacturing/defence machinery, branded automobiles, electrical machinery and pharmaceuticals. Where there probably is little scope, but fairly limited. Would there be any opportunity for India to export to the US, given the tensions between the US and China? This is nothing but China+1. And one must note that the US' imports from China are skewed towards telecom/manufacturing/construction equip. and consumer/apparel where there appears some scope; but provided tariffs ease. Remember currently at 50% tariffs, India is much less competitive than its Asian peers; when compared to the first round of tariffs in April this year. In short, India's export composition of energy, relatively lower-end autos, pharma and smartphones, do not match much with Chinese and Russian imports. Political probabilities apart, it seems reasonable to deduce that deeper US-India trade relations would be a more realistic outcome than China-Russia trade relations.

Market Outlook

Valuations

Equity markets remained range-bound and muted in September, with no appreciable change in valuations either across cap curves. India's 1Y forward price-to-equity valuations for Mid and Small caps, that had begun converging directionally towards NIFTY valuations appear to have seen a pause during the month. Valuations remain well above their long-term averages (LTAs) for all cap curves. We reiterate the need to for short-term investors in adopting a balanced asset allocation approach in their portfolios. Long-term portfolios on the other hand, can make use of equity market volatilities into the months ahead.

Headline India equity valuation premiums over emerging markets have corrected closer to pre-pandemic averages. With equity markets having time-corrected, we expect focus to center around the incremental pace of change in earnings than just narratives. Earnings expectations have moderated over the last one year viz., in domestic-oriented sectors, with reasonable triggers for upgrades to set in certain pockets as we walk into the year ahead – a welcome sign, after a patch of limited surprises. Adding a layer of improved monsoons and favourable rural economic backdrop, we remain optimistic of an improved earnings cycle ahead.

	Aug 2025	Sep 2025	Remarks
INR 10-year G-Sec	6.56%	6.57%	The yield on India's 10-year government bond remained volatile throughout September, closed 1 basis points higher by month-end. This upward movement was capped on hoping RBI will either cut rates or indicate room to cut further in the upcoming MPC meet
INR 5-year G-sec	6.28%	6.19%	5-year Indian government bond was down by 9 bps in September month and spread between 5/10 govt. bonds remained around 38 bps
1-year OIS	5.54%	5.45%	In September month 1-year OIS was down by 9 bps on expectation of rate cut by RBI in Oct monetary policy
5-Year OIS	5.78%	5.74%	5yr Overnight Index Swap was down by 4 bps in September month
PMI composite	61.1 (Jun'25)	63.2 (Aug'25)	Composite PMI came at 63.2 in August month, both manufacturing and services activities remains into expansion zone indicating robust economic activity
PMI Manufacturing	59.1 (Jul'25)	59.3 (Aug'25)	Indias Manufacturing PMI in August month increase to 59.3 due to rise in new business order. India's Manufacturing sector maintains strong momentum driven by strong domestic and overseas demand
PMI Services	60.5 (Jun'25)	62.9 (Aug'25)	India's service PMI in August month increase to 62.9 due to strong rises in new business order
Banking System Liquidity (in Rs Lakh crores)	2.86	1.4	In September month average Indian banking system liquidity continued to remain in surplus. In Mid-month liquidity turned deficit on account of Advance tax and GST payment related outflow to balance it RBI conducted multiple VRR operation
CPI (%)	1.55%	2.07%	CPI inflation inched higher to 2.07% in August month, uptick was mainly driven by higher food inflation, which saw slower pace of contraction than previous month. Core inflation remained steady around 4.1%
WPI (%)	-58%	0.52%	WPI inflation increased to 0.52% in August month. Core inflation came at 1.63% in August month
INR	88.20	88.79	In August month INR depreciated 0.71% against US dollar, during the month within the basket of 23 emerging market currencies. Rupee ranked 18th out of 23.
Forex Reserves (USD Billion)	694.23	700.23	Forex reserve in September month increased by ~6Bn\$ to 700.23Bn\$ driven by increase in gold reserve (~8.24 Bn\$ MoM) while foreign reserve was down by ~2 Bn\$ MoM
Trade Deficit (USD billion)	27.35 (Jul'25)	26.5 (Aug'25)	The trade deficit narrowed marginally to 26.5 Bn\$ in August month led by lower import, it was attributed by drop in gold and non-oil non gold import
FPI flows debt (USD billion)	1.81	0.86	FPI debt flow remained positive in September month
FPI flows equity (USD billion)	-4.21	-2.49	FPI equity flows remained negative in September month mainly due to tariff imposed by trump administration
Brent Crude (\$/bbl.)	67.48	66.03	Crude oil price lowered by ~1\$/bbl. in September month due to demand softness

Inflation

CPI for August'25 broke the falling trend of the past 10 months and moved back up to 2.07% as against 1.55% in July. Much of this upward reversal was led by vegetables, which witnessed a slower pace of deflation (-0.69%) compared to July (-1.76%). Incidentally, food inflation witnessed the third straight month of deflation. Core inflation stood relatively unchanged at 4.1% for August'25. GST reductions should translate to some softening in CPI in the coming months.

WPI inflation moved into positive at 0.5% from -0.6% in July. Core CPI came in at 1.6%. further into deflation printing at -0.6% y/y in Jul'25 from -0.1%, well below market expectations of -0.3%.

MPC meeting

At the October policy, through a unanimous vote (6-0), the MPC kept the key rates unchanged. The rate stance was maintained at 'neutral' with a 4-2 vote.

Hence repo stays at 5.50%, while MSF and SDF stay at 5.75% and 5.25%, respectively. The Policy commentary bordered on 'dovish' with RBI cutting its CPI forecast for full year FY26 further down by 50 bps to 2.6% from the earlier forecast of 3.1%, which itself was revised down from 3.7%. Growth forecast for FY26 meanwhile has been upped to 6.8% from 6.6%. RBI expects GST rationalization to have a 'sobering' effect on inflation. Also, a strong monsoon in RBI's view should aid in keeping food inflation in check.

Beyond the policy, RBI also unleashed a barrage of banking sector reforms, key amongst these being more freedom being offered to banks in capital market lending including a framework for Indian banks to finance acquisition by Indian corporates,

loan against shares (limit enhanced by 5x) and IPO financing (limit up by 2.5x). Besides a glide path has also been set up for the move to ECL (expected credit loss provisioning) starting April 2027 until 2031. Revised capital adequacy norms under Basel III will now begin from April 27 as against April 26 earlier. Also NBFCs to enjoy lower risk weights on high quality and operational infra projects.

Monsoon update

The monsoon season ended with a cumulative surplus of 8% more rain (as on 29th September) at 935 mm (vs 880 mm). This was even higher than the IMD forecast of +6% over long period average. There is a prediction for some more rain in early October that could add to the surplus. Overall, northwest, central and south India enjoyed above average rainfall. The east and north-east faced a deficit. 2025 enjoyed the double distinction of recording above average rains in each month and the full season, being only the 5 time ever since 1956.

A healthy monsoon augurs well for the Kharif harvest as also the upcoming winter crop, that should help in keeping food inflation in check.

Tariff update

Indian merchandise exports to the US barring pharma and services now attracts a 50% tariff. The US government has also initiated a 100% tariff on non-generics i.e. patented pharmaceutical exports. Branded pharma exports is miniscule for India and as such appear safe for now, though uncertainty prevails on whether the scope can be expanded to included unbranded pharma. While the proposal stipulates that patented pharma should be manufactured in the US this has currently not been applied to generics.

The US govt also imposed additional costs by levying fees on new HI-B visas stating

that all new petitions will face a USD 100,000 fee on application. Existing HI-Bs have however been excluded. Since India is the largest user of HI-B visas used mainly for its IT personnel, these are additional costs for the IT sector that is already facing pressures on margins given the increasing use of AI that is threatening to replace many entry level staff.

The 50% tariff rate imposed on India is now higher than the 15% imposed on peer exporting nations such as Indonesia, Vietnam, Thailand etc. This has the risk of impacting India's export competitiveness. EU and Japan have closed deals and are at 15%. India's overall exports to the US are close to USD 80 bn, and the 50% tariff is expected to depress GDP by 0.2-0.4%.

GST 2.0

The new GST rates took effect on September 22nd. GST 2.0 has effectively transitioned to a 2-tier structure with slabs at 5% (for merit goods), 18% (for standard goods) and a separate 40% (for luxury and sin goods).

Almost 99% of items in the erstwhile 12% slab have been moved lower to the 5% slab. Similarly, 90% of items in the 28% have moved to the 18% slab. Earlier, 7% of the gross GST revenue flowed in from the 5% slab while 65-70% came in from the 18% slab, which was the largest and should expand further given that auto and cement, 2 of the largest contributors to GST have moved from 28% to the 18% slab.

Govt estimates a total revenue loss of approx. INR 500 bn basis 2023-24 data. However, it hopes to make up for it through higher volume sales which it expects to be durable and outlast the festive season.

Global Macro

US GDP for Q2-25 was revised sharply upwards to 3.8%, 50 bps higher than the 3.3% reported in the second estimate. Q1-25 witnessed a 0.6% contraction as imports were brought forward to beat the April 2 deadline which saw imposition of import tariffs by the US on almost all of its trading partner countries. 2024 saw GDP grow by 2.8%. CPI meanwhile continues to print close to 3% (2.9% in August).

Tariff receipts for August touched almost USD 30 bn, up 4x from USD 7.5% collected in August 2024. While tariff collections are growing, these are likely imposing higher costs on the economy and the US consumer that could raise inflation and slow growth in the medium term.

The Fed also finally cut its key rates to 4.0-4.25% in September, to levels that were last seen in late 2022. This cut has come after a long 9 month pause, with the last cut seen in December 24. The Fed pivoted, citing concerns from a slowing labor market which it called a 'catalyst' for the cut and borne out by jumbo downward revisions to new jobs added in the preceding 3 months.

Market outlook

Liquidity

Daily average liquidity surplus dipped in September to 1.4l NR tn after an almost flat INR 3 tn in August and July. The liquidity surplus was progressively consumed, initially by advance tax payouts in mid-month followed by GST outflows around 20th. Daily average WACR (weighted average call rate) for September was 5.37 % reflecting overall liquidity comfort, though WACR saw spikes on days with negative liquidity.

Currency in circulation rose 8% in September adding to the pressure. Persistent pressure on INR ever since the 50% tariff kicked in, is potentially being countered with intermittent interventions by RBI that has the effect of draining INR from the system.

The 2nd tranche of CRR cut is effective from October 4th fortnight that will infuse liquidity of INR 600 bn. The last tranche will be effective from the November 29th fortnight. Besides a G sec maturity of c. INR 700 bn in September will also add to the liquidity.

RBI has committed to keep liquidity in surplus at closer to 1% of NDTL to aid in rate transmission. While it is difficult to exactly gauge the pass through thus far, market views suggest close to 50-70% of the cut may have been transmitted to borrowers.

The need for durable liquidity infusion might open-up in Q4 if system encounters persistent decline in daily liquidity that may impact the durability. This may open some space for OMOs as we witnessed earlier in Q1-FY26. This could lend some support to mid and longer duration bonds.

Borrowing calendar – H2FY26

Gross G-sec issuance in H2-FY26 of INR 6.8 tn (net at INR 4.9 tn) is favourable with higher allocation to lower tenors in response to falling demand from insurance and pension funds at the very long end (30 years and longer). Issuance is focussed on the 3 to 5Y (19.9%) and 10 y (28.4%).

The combination of slowing tax collections and a reduction in state government cash surplus, led to a rise in SDL (State Development Loans) issuance in H1FY26. Based on state government budgets, full year FY26 gross issuance is budgeted at INR12.3tn, implying gross issuance of INR7.3tn in H2-FY26, which is higher than H2 of last year by 6.2%.

The net supply of centre plus state government issuances is expected to rise to INR10.1tn in H2FY26 v/s INR6.3tn in H1FY26.

Investment strategy

Our call of staying invested in the short to mid duration segment both in leading up to and even post the start of the rate cutting cycle has fared well. We stick to this call and suggest no changes for now, given that there still exist a lot of moving parts that can impact macro negatively.

Even as G sec issuances are focussed on the shorter tenors, likely issuance in long and ultra long bond issuance from SDLs can pressure the longer end of the curve. Tax shortfalls and revenue slippages owing to the uncertainties from tariffs can add to the pressure. Given this combination, we prefer sticking to the front end of the curve (upto 5 years), to avoid any yield spikes.

The October 1st policy offers room for rate easing as inflation forecasts have been lowered for FY26 and even for Q1-FY27 are just a shade over 4%. RBI expects the balance of the past rate cuts also to be fully transmitted in the next few months, which should set the stage for another round of easing. Besides the Fed having commenced rate cuts in September and another policy due in October should offer more clarity to RBI. It is also likely that there could be some clarity on tariff related issues.

We recommend conservative investors to stick to front end of the curve through funds such as the Overnight, Liquid and Ultra short duration funds. Investors with a marginally higher horizon can look to deploy in Low duration and Money market funds to benefit from the prevailing higher spread relative to repo.

Investors with higher risk appetite and longer tenors can consider the mid duration buckets such as the short duration fund, corporate bond fund and Banking PSU bond fund where the 2-to-5-year high quality corporate bonds are available at a 65 to 70 basis points spread.

HOW TO READ THE FACTSHEET

Minimum Amount

This is the minimum investment amount for a new investor in a mutual fund scheme.

SIP

A Systematic Investment Plan (SIP) is a way to invest a fixed amount of money regularly. It works like a recurring bank deposit. For example, you can set up an SIP to invest Rs. 100 on the 1st of every month in an equity fund for a certain period, like three years.

NAV

The NAV (Net Asset Value) is the price of one unit of a mutual fund after all expenses have been deducted. It shows the total value of the fund's assets divided by the number of units. The NAV is calculated at the end of each business day and is the price at which you buy or sell units of the mutual fund.

Benchmark

A benchmark is a group of securities, often a market index, used to measure the performance of mutual funds and other investments. It helps investors compare how well their investments are doing. Common benchmarks include indexes like NIFTY, SENSEX, BSE200, BSE500, and the 10-Year Government Security (G-sec).

IDCW Option

In line with applicable SEBI guidelines, with effect from April 1, 2021, the name of "Dividend Option" under the Schemes stand revised as "Income Distribution cum Capital Withdrawal (IDCW) Option". IDCW Option may offer Payout and Reinvestment Sub-options / facilities. Investors may note that the amounts can be distributed out of investor's capital (Equalization Reserve), which is part of sale price that represents realized gains.

Exit Load

Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is reduced from the prevailing NAV at the time of redemption. The investor will receive redemption proceed at net value of NAV less Exit Load. For instance if the NAV is Rs. 100 and the exit load is 1%, the investor will receive Rs. 99.

Net Equity

Net equity level is the net equity exposure percentage adjusted for any derivative positions in stocks or index for hedging or rebalancing purpose.

AUM

AUM or assets under management refers to the recent / updated cumulative market value of investments managed by a mutual fund or any investment firm

Holdings

The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager

Nature of Scheme

Mutual funds are categorized into Equity Funds, Debt Funds, Hybrid Funds, Solution-Oriented Funds, and additional schemes like Index Funds and Funds of Funds. Each category caters to diverse investment goals, offering flexibility for varying risk appetites and financial objectives.

Rating Profile

Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

Market Capitalisation

Market cap is calculated by the number of shares outstanding, multiplied by the current market price of one share. A mutual fund categorized by market cap (i.e., small-cap, mid-cap or large-cap) indicates the size of the companies in which the fund invests, not the size of the mutual fund.

Weighted Average / Median Market Cap

Weighted average market capitalization is a type of market index in which each component is weighted according to the size of its total market capitalization. Median Market Cap is the midpoint of market capitalization of the stocks in a portfolio.

Riskometer

Riskometer is a graphical representation of the risk a mutual fund carries. The graph is designed as per the Association of Mutual Funds in India (AMFI) guidelines.

QUANTITATIVE MEASURES EXPLAINED

Sharpe Ratio

The Sharpe Ratio is a measure that compares the return of an investment to its risk. It shows how much extra return is generated for each unit of risk taken, compared to a risk-free investment. A positive Sharpe Ratio means the portfolio is giving investors better returns for the risk they're taking. It is calculated using standard deviation and excess return to determine reward per unit of risk.

Beta

Beta measures how much an investment's price moves compared to the overall market. A Beta of less than 1 means the investment is less volatile than the market, while a Beta greater than 1 means it's more volatile. For a portfolio, Beta (β) indicates how its returns move in relation to the market index. It helps measure the portfolio's volatility or systematic risk compared to the market as a whole.

Standard Deviation

Standard deviation is a measure that shows how much an investment's performance can vary. If a mutual fund has a high standard deviation, it means the performance can swing widely, indicating greater volatility. It helps to understand the level of risk or expected price fluctuation of a portfolio. A higher standard deviation means more volatility (higher risk), while a lower standard deviation means less volatility (lower risk).

Risk Free Return

The theoretical rate of return of an investment with safest (zero risk) investment in a country.

Total Expense Ratio

Total expenses charged to scheme for the month expressed as a percentage to average monthly net assets.

Tracking Error

Tracking error indicates how closely the portfolio return is tracking the benchmark Index return. It measures the deviation between portfolio return and benchmark index return. A lower tracking error indicates portfolio closely tracking benchmark index and higher tracking error indicates portfolio returns with higher deviation from benchmark index returns.

Information Ratio

It is a measure of the risk-adjusted returns of the fund. It is the excess return over benchmark divided by the tracking error.

The information ratio is often used to gauge the skill of fund managers. It measures the expected active return of the manager's portfolio divided by the amount of risk the manager takes relative to the benchmark. The higher the information ratio, the better is the manager's performance. It shows the manager's consistency in generating superior risk-adjusted performance

Portfolio Yield (Yield To Maturity)

The Yield to Maturity (YTM) is the expected rate of return on a bond if it is held until it matures. It is expressed as an annual percentage. YTM takes into account the bond's current market price, face value, interest rate, and the time left until maturity. It reflects the weighted average yield of all the securities in the bond's portfolio.

Portfolio Turnover Ratio

Portfolio Turnover Ratio is the percentage of a fund's holdings that have changed in a given year. This ratio measures the fund's trading activity, which is computed by taking the lesser of purchases or sales and dividing by average monthly net assets

Modified Duration

Modified duration measures how sensitive the price of a security is to changes in interest rates. It shows the percentage change in price for a one-unit change in yield. This formula helps predict how the value of a security or portfolio will change when interest rates move. The modified duration of a portfolio can be used to estimate how its market value will change with each shift in interest rates.

Macaulay Duration (Duration)

Macaulay Duration (Duration) measures the price volatility of fixed income securities. It is often used in the comparison of interest rate risk between securities with different coupons and different maturities. It is defined as the weighted average time to cash flows of a bond where the weights are nothing but the present value of the cash flows themselves. It is expressed in years/days. The duration of a fixed income security is always shorter than its term to maturity, except in the case of zero coupon securities where they are the same.

Sundaram Large Cap Fund

An open-ended equity scheme predominantly investing in large cap stocks

The detailed history is available on www.sundarammutual.com

Past performance may or may not be sustained in future and should not be used as a basis for comparison with other investments. Past performance is no guarantee of future result. Mutual Fund investments are subject to market risks, read all scheme related documents carefully. There can be no assurance or guarantee that fund's objectives will be achieved. NAV may go up or down, depending on the factors and forces affecting the securities market. The names of the schemes do not in any manner indicate either quality or future prospects and returns

For more details on fund-specific features, detailed risk factors and information on Sundaram Asset Management, please read the Statement of Additional Information and Scheme Information Document available on www.sundarammutual.com. Specific to information in the Fact Sheet: Portfolio Attributes: Disclaimer for Income Distribution cum Capital Withdrawal (IDCW): IDCW is declared on the face value of 10 per unit. After declaration and payment of IDCW (including re-investment), the ex-IDCW NAV will decline to the extent of the IDCW payment. Exposure to derivatives: The value indicated for derivatives represents the exposure to equity through to index futures, index options, stock futures and stock options. The margin may be only a proportion of the exposure and to the extent, it is lower, cash in the fund's accounts will be higher.

Portfolio Weights & NAV: Stock and sector weights have been rounded to one- decimal place and may not add exactly to 100%. NAV information in this document is as on **Sep 30, 2025** unless otherwise specified. Returns are based on NAV as of **Sep 30, 2025**. Average AUM for month **Sep 30, 2025**.

Returns: As per the SEBI standards for performance reporting, "since inception" returns are calculated based on Rs.10 invested at inception of the funds. For this purpose, the inception date is deemed to be the date of allotment. Returns are computed using the NAV of Regular Plan - Growth Option where a separate IDCW and Growth option is available from inception and an adjusted-series of NAV for Sundaram Diversified Equity (Erstwhile Sundaram Tax Saver) for IDCW declared before separate IDCW & Growth Options were introduced. Returns for periods in excess of one year is on a compounded annual basis; the returns are net of fees and expenses but before taking into account effect of entry load. Returns to investors may be lower to the extent of entry load and timing of investment in the fund. Returns are net of fees and expenses. Past performance may or may not be sustained in future and the numbers should not be used as a basis for comparison with other investments.

Performance Analysis is on an annualized basis as of **Sep 30, 2025**. Computation is based on the month end NAV of the fund, designated benchmarks of the schemes. The risk-free Index is MIBOR Overnight. Data Source: Bloomberg; Computation: In- house. Fund Features: Scheme Type, Investment Objective, Plans, Options, Entry Load and Exit Load have been outlined in the respective fund-specific Fact Sheet pages. NAV will be published on every business day.

Standard Risk Factors: Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal. As the price/ value/ interest rates of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down. As with any investment in stocks, shares and securities, the NAV of the Units under the Scheme can go up or down, depending on the factors and forces affecting the capital markets. Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the Scheme. The sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of 1 lakh made by them towards setting up the Fund. The present Scheme is not guaranteed or assured return Scheme. Change in Government policy in general and changes in tax benefits applicable to mutual funds may impact the returns to Investors. Applicable to equity schemes (except Sundaram Diversified Equity (Erstwhile Sundaram Tax Saver & Sundaram ELSS Tax Saver Fund). For any overseas investments in equity funds - country risk, currency risk and geopolitical risk, to name a few.

Scheme-Specific Risk Factors:

Sundaram Large Cap Fund: • Investment in the scheme may be affected by risks associated with equities and fixed income securities. • The Scheme aims to provide long term capital growth by predominantly investing in large cap stocks. however, given the inherent risks of investing in equity markets, the value of the investments may go up or down. • The Scheme retains the flexibility to hold from time to time relatively more concentrated investments in a few sectors. This may make the Scheme vulnerable to factors that may affect these sectors in specific and may be subject to a greater level of market risk leading to increased volatility in the Scheme's NAV. • Changes in government policies may impact the performance of the Scheme. • The scheme shall engage in Securities lending, which includes risks such as counter party risk, liquidity risk and other market risks. • Investment in REITs/ InvITs instruments involve risks such as Interest-Rate Risk, Risk of lower than expected distributions, Liquidity Risk, Price-Risk and etc. • The scheme may invest in ADR/GDR/Overseas Securities. These investments may expose the scheme to investment risks associated with such investments like currency risk etc. • The scheme may invest in Repo in Corporate Bonds. These investments may expose the scheme to investment risks associated with such investments. • The Scheme may use derivative instruments for the purpose of trading, hedging and portfolio balancing, as permitted under the Regulations. usage of derivatives will expose the scheme to certain risks inherent to such derivatives. • Segregated portfolio may be created, in case of a credit event at issuer level i.e. downgrade in credit rating by a SEBI registered credit Rating agency (CRA) which involves Liquidity Risk & credit Risk and etc.

Sundaram Focused Fund: Since the number of stocks would be limited to 30, the portfolio may be more concentrated and volatile in comparison to a more diversified portfolio of equity securities. Sundaram Mid Cap Fund: • Volatility - • Low Liquidity • Equity Price risk • Risk associated with Securities Lending • Derivative Risk • Segregated portfolio Risk Sundaram Small Cap Fund: • Volatility • Low Liquidity • Equity Price Risk • Dependency Risk • Temporary Investment Risk • Non-diversification Risk • Asset-Class Risk • Segregated portfolio Risk. Sundaram Large and Mid Cap Fund: Non diversification & Lack of liquidity • Segregated portfolio Risk. Sundaram Multi Cap Fund: 1. The Scheme has to invest a minimum of 25% in each of large, mid and small cap stocks. So even in times where a particular cap curve may be out of favour and underperform the scheme will be forced to invest in it. 2. The Scheme can invest a maximum of 50% in any one of the cap curves based on the discretion of the Fund Manager. If the call of the Fund Manager is wrong and if the particular cap curve underperforms the performance of the Scheme will be affected. 3. The Scheme will invest a minimum of 25% in each of mid and small cap curves. Mid and small cap stocks are inherently volatile and also suffer from lack of liquidity. 4. Segregated portfolio may be created, in case of a credit event at issuer level i.e. downgrade in credit rating by a SEBI registered Credit Rating Agency (CRA) which involves Liquidity Risk & Credit Risk etc.

Sundaram Infrastructure Advantage Fund: Infrastructure projects by their very nature have a long gestation period. Therefore, the Fund will rely heavily on future investments in the Infrastructure sector that will take a long time to materialize. The Mutual Fund's NAV will depend upon the performance of the companies within the Infrastructure sector. Normally, in a diversified equity fund, investments are made in companies from different sectors. So, if one sector is not doing well, the investments in the other sector will balance it. The Fund however, will predominantly invest in companies in the Infrastructure sector. The investments will be limited to quality Infrastructure companies. The performance of the Fund will also depend upon the efficiency of the Government to execute projects within a given time frame. The opening up of the infrastructure sector to private/foreign ownership / investment depends upon the policy and guidelines issued from time to time by the Government of India. The growth of Infrastructure sector is greatly dependent on the Government's fiscal policies and legislation. The fiscal policy of the Government may also be subject to the WTO Agreement. The performance of the Infrastructure sector may also be affected by the competitiveness of the industry and firm level inefficiencies. The risks associated with the thematic portfolio will be lower than that of a sector-specific fund and higher than that of a typical diversified fund.

Sundaram Consumption Fund: Variegates of nature such as erratic monsoon, failure of crop & drought, to name a few; cyclical / seasonal factors. Since the Fund invests in companies that essentially focus on industries such as agro chemicals /pesticide/ Sugar, coffee, Tea, Jute products etc are subject to the vagaries of nature like erratic monsoon, failure of crop, folds drought etc. hence the performance of the fund will be affected by it. Industries such as Jute, man made fibre etc., are cyclical /seasonal in nature. They are driven

by demand which may not be consistent in a time period. The performance of the Fund will also depend upon the Government and its policy. The growth oriented Policy adopted by the Government and its ability to execute projects within a given time frame will also have a bearing on the performance of the Fund.

Sundaram Services Fund: Investing in specific sectors can be a risky strategy, given that the sector can underperform which may lead to all the companies in the sector underperforming. Newly emerging sectors within the services sector have a high risk return profile. As these tend to be small companies they carry a disproportionately high probability of failure. Also their financials tend to be weak than that of companies that are established. Engaging in securities lending will involve risks such as counter party risk, liquidity risk and other market risk. Any change in Government policies specific to the services sector will have an adverse impact on the Scheme The Scheme may use derivative instruments for the purpose of trading, hedging and portfolio balancing, as permitted under the Regulations. Usage of derivatives will expose the scheme to certain risks inherent to such derivatives. Thus, there is risk of capital loss.

Sundaram Global Brand Fund Theme - Equity Active FoF (Formerly Sundaram Global Brand Fund): • Risks of investing in overseas securities. These investments may expose the scheme to investment risks associated with such investments like Foreign exposure and Currency Risk, Country Risk, event Risk, Restrictions imposed overseas, emerging Markets Risks, Regulation Change Risk, Corporate Governance, economic Factors etc. • The Scheme's portfolio consists of the top 30 global brands and is based on an unique selection process which relies partly on third party reports and internal analysis. Any error in the methodologies adopted for valuing brands may affect the portfolio either by omission or by including names which probably should not be included leading to an impact on performance. • While global brand companies are expected to outperform it may not necessarily be so in actual practice (i.e. as they may be fully valued etc.) leading to underperformance. • The methodology used for valuing and identifying brand names may not be able to identify new up and coming companies with potential to be global brands in future leading to having a portfolio of 'yesterday's top brands' leading to missed opportunities and under performance. • Brands may go out of fashion and the methodology may be late in recognizing this leading to having investments in the portfolio that are under performing. • Global brand companies may be over- valued for a variety of reasons and can experience a sharp fall in their value as the market corrects the over valuation leading to underperformance. • Segregated portfolio may be created, in case of a credit event at issuer level i.e. downgrade in credit rating by a SEBI registered Credit Rating Agency (CRA) which involves Liquidity Risk & Credit Risk etc.

Sundaram Balanced Advantage Fund: • Scheme is to be managed dynamically depending on the Fund Manager's outlook of the economy, markets etc. The Fund Manager may not be able to correctly identify these opportunities resulting in a sub optimal asset allocation leading to a below average or even loss making performance. • There is no guarantee that the Fund Manager will be able to spot investment opportunities or correctly exploit price discrepancies in the different segments of the market. • The risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. • The Scheme is also expected to have a high portfolio churn, especially in a volatile market. • There is an execution risk while implementing arbitrage strategies across various segments of the market, which may result in missed investment opportunities, or may also result in losses/high transaction costs. • In case of a large outflow from the Scheme, the Scheme may need to reverse the spot-futures transaction before the settlement of the futures trade. While reversing the spot-futures transaction on the exchange, there could be a risk of price of the market being different from the price at which the actual reversal is processed. • While future market is typically more liquid than underlying cash market, there can be no assurance that ready liquidity would exist at all point in time for the Scheme to purchase and close out a specific futures contract. • In case of arbitrage, if futures are allowed to expire without corresponding buy/sell in cash market, there is a risk that price at which futures expires, may/may not match with the actual cost at which it is bought/sold in the cash market in last half an hour of the expiry day (Weighted average price for buy or sell). • Investment in Equities and Equity related instruments involve risks such as Stock Market Volatility, Equity Price Risk, Dependency Risk, Temporary Investment Risk, Non-diversification Risk, Regulation- Change Risk and etc. • Investments in Debt Securities and Money Market Instruments involve risks such as Interest Rate Risk, Credit risk, Price risk, Market risk, Liquidity risk, risk relating to investment pattern, risks relating to duration, non- diversification risk, Limited Liquidity, Price Risk and etc. • Engaging in securities lending will involve risks such as counter party risk, liquidity risk and other market risk. • Investment in REITs/InvITs instruments involve risks such as Interest-Rate Risk, Risk of lower than expected distributions, Liquidity Risk, Price-Risk, etc. • Investment in Repo in Corporate Bond involve risks such as counter party risk, Market Risk, Credit Risk and etc. • The Scheme proposes to invest in equity and equity related instruments by identifying and exploiting price discrepancies in cash and derivative segments of the market. These investments by nature are volatile as the prices of the underlying securities are affected by various factors such as liquidity, time to settlement date, news flow, spreads between cash and derivatives market at different points of time, trading volumes, etc. • Segregated portfolio may be created, in case of a credit event at issuer level i.e. downgrade in credit rating by a SEBI registered credit Rating agency (CRA) which involves Liquidity Risk & Credit Risk, etc.

Sundaram Equity Savings Fund: •Risks associated with the Scheme's Arbitrage Strategy • The Scheme proposes to invest in equity and equity related instruments by identifying and exploiting price discrepancies in cash and derivative segments of the market. These investments by nature are volatile as the prices of the underlying securities are affected by various factors such as liquidity, time to settlement date, news flow, spreads between cash and derivatives market at different points of time, trading volumes, etc. • There is no guarantee that the Fund Manager will be able to spot investment opportunities or correctly exploit price discrepancies in the different segments of the market. • The risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. • The Scheme is also expected to have a high portfolio churn,

especially in a volatile market. • There is an execution risk while implementing arbitrage strategies across various segments of the market, which may result in missed investment opportunities, or may also result in losses/high transaction costs. • In case of a large outflow from the Scheme, the Scheme may need to reverse the spot-futures transaction before the settlement of the futures trade. While reversing the spot-futures transaction on the Futures and Options exchange, there could be a risk of price of the market being different from the price at which the actual reversal is processed. • While future market are typically more liquid than underlying cash market, there can be no assurance that ready liquidity would exist at all point in time for the Scheme to purchase and close out a specific futures contract. • In case of arbitrage, if futures are allowed to expire without corresponding buy/sell in cash market, there is a risk that price at which futures expires, may/may not match with the actual cost at which it is bought/sold in the cash market in last half an hour of the expiry day (Weighted average price for buy or sell). • Investment in Equities and Equity related instruments involve risks such as Stock Market Volatility, Equity Price Risk, Dependency Risk, Temporary Investment Risk, Non-diversification Risk, Regulation-Change Risk and etc. • Investments in Debt Securities and Money Market Instruments involve risks such as Interest Rate Risk, Credit Risk, Price Risk, Market Risk, Liquidity Risk, Risk relating to investment pattern, Risks relating to duration, Non-diversification Risk, Limited Liquidity, Price Risk and etc. • Engaging in securities lending will involve risks such as counter party risk, liquidity risk and other market risk. • Investment in REITs/ InvITs instruments involve risks such as Interest-Rate Risk, Risk of lower than expected distributions, Liquidity Risk, Price- Risk and etc. • Investment in Repo in Corporate Bond involve risks such as counter party risk, Market Risk, Credit Risk and etc. Any change in policy by the Government/ RBI/Regulator can have an adverse impact on the Scheme.

Sundaram Aggressive Hybrid Fund: • Stock Market Volatility: Stock markets are volatile and can decline significantly in response to adverse issuer, political, regulatory, market, or economic developments. • Low Liquidity – midcap and small stocks are thinly traded and during times of crisis liquidity can dry up even further inhibiting the ability of the Fund manager to exit the stock • Equity Price Risk: Stock prices may rise or decline based on a number of factors. Prices change due to events that impact entire financial markets or industries • Dependency Risk: The Scheme may invest in stocks and mutual funds and exchange-traded funds linked to stocks. Dependent on Stock Movement. • Temporary Investment Risk: Market or economic conditions may become unfavorable for investors in equities • non-diversification Risk: The Scheme may pursue only a limited degree of diversification. • Asset-Class Risk: Stocks have historically outpaced other asset classes such as gold, fixed deposits and bonds, to name a few, over the long-term in India. • Change in Government policy in general and changes in tax benefits applicable to mutual funds may impact the returns to Investors. • Tax-free status for long-term capital gains and IDCW will depend on the fund investing more than 65% in equity to qualify in accordance with provisions of the Income Tax Act, 1961 Sundaram Emerging Small Cap: Varying levels of liquidity, higher volatility, lower levels of transparency, management bandwidth, difficulty in accessing funds and technology, low entry barriers, higher impact costs, risks specific to unlisted companies, risks specific to use of derivatives, lower volume of trading in the units of the Scheme on the NSE and changes in government policies, to name a few, are key factors that may impact the performance of and liquidity in the Scheme.

Sundaram Multi Asset Allocation Fund would be investing in Equity & Equity related Securities, Debt & Money Market Instruments, Gold ETFs and such other asset classes permitted by SEBI time to time. Different asset class carry different types of risk as mentioned in the Scheme Information Document. Accordingly, the scheme's risk may increase or decrease depending upon the investment pattern. Scheme would follow Dynamic Asset Allocation pattern as mentioned in the Asset Allocation section of Scheme Information Documents.

Sundaram Dividend Yield Fund: • The value of Scheme's investments may be affected by factors affecting the Securities markets and price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in law/ policies of the Government, taxation laws and political, economic or other developments which may have an adverse bearing on individual securities, a specific sector or all sectors. Consequently, the NAV of the units of the Scheme may be affected. • Equity & Equity related securities are volatile and prone to price fluctuations on a daily basis. The liquidity of investments made in the Scheme may be restricted by trading volumes and settlement periods. Settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme's portfolio may result, at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme's portfolio. • The liquidity and valuation of the Scheme's investments due to the holdings of unlisted securities may be affected if they have to be sold prior to the target date of disinvestment. • Securities which are not quoted on the stock exchanges are inherently illiquid in nature and carry a larger liquidity risk in comparison with securities that are listed on the exchanges or offer other exit options to the investors, including put options. • The liquidity of the Scheme is inherently restricted by trading volumes in securities in which it invests. • Investment decisions made by the Investment Manager may not always be profitable. To the extent the underlying Mutual Fund Scheme invest in Equity and Equity related Instruments, the Scheme(s) which shall invest in Equity Mutual Fund Schemes (where the asset allocation pattern of the Scheme provides such investment) shall be affected by the afore mentioned risk factors. The Net Asset Value (NAV) of the units of the Scheme is likely to get effected on accounts of such risk factors. Any change in the investment policies or fundamental attributes of any underlying scheme is likely to affect the performance of the Scheme. Further, the liquidity of the Scheme's investments may be inherently restricted by the liquidity of the underlying schemes in which it has invested.

Sundaram Long Term Micro Cap Tax Advantage Fund: • Sundaram Long Term Micro Cap Tax Advantage Fund Series III would be investing in equity & equity related instruments, debt and money market instruments (such as term/notice money market, repos, reverse repos and any alternative to

the call money market as may be directed by the RBI). The liquidity of the scheme's investments is inherently restricted by trading volumes and settlement periods. In the event of an inordinately large number of redemption requests, or of a restructuring of the scheme's investment portfolio, these periods may become significant. In view of the same, the trustees have the right in their sole discretion to limit redemptions (including suspending redemptions) under certain circumstances or unusual market conditions including stock market closure (otherwise than for ordinary holidays), unforeseen circumstances where disposing assets of the scheme is not in the best interest of unitholders, extreme volatility of markets or if so directed by SEBI. • Investment in ELSS is subject to lock-in period of three years. During this period investors will not be able to redeem their units. To this extent the liquidity for the investor is restricted and this may restrict exit at opportune moments. • Varying levels of liquidity, higher volatility, lower levels of transparency, management bandwidth, difficulty in accessing funds and technology, low entry barriers, higher impact costs, risks specific to unlisted companies and changes in government policies, to name a few, are key factors that may impact the performance of and liquidity in the Scheme.

Sundaram Long Term Tax Advantage Fund: • Sundaram Long Term Tax Advantage Fund-Series-I would be investing in equity & equity related instruments, debt and money market instruments (such as term/notice money market, repos, reverse repos and any alternative to the call money market as may be directed by the RBI). The liquidity of the scheme's investments is inherently restricted by trading volumes and settlement periods. In the event of an inordinately large number of redemption requests, or of a restructuring of the scheme's investment portfolio, these periods may become significant. In view of the same, the Trustees have the right in their sole discretion to limit redemptions (including suspending redemptions) under certain circumstances or unusual market conditions including stock market closure (otherwise than for ordinary holidays), unforeseen circumstances where disposing assets of the scheme is not in the best interest of unitholders, extreme volatility of markets or if so directed by SEBI. • Investment in ELSS is subject to lock-in period of three years. During this period investors will not be able to redeem their units. To this extent the liquidity for the investor is restricted and this may restrict exit at opportune moments.

Sundaram Financial Services Opportunities Fund: Factors that could impinge on performance include changes in interest rates in India and overseas markets, changes in regulatory framework applicable to companies in financial services, government policy on ownership, savings patterns and deployment of such savings and levels and trends in capital market activity. The scheme being sector specific will be affected by the risks associated with the Financial Services sector. Investing in a sectoral fund is based on the premise that the Fund will seek to invest in companies belonging to a specific sector. This will limit the capability of the Fund to invest in another sector. The fund would invest in equity and equity related securities of companies engaged in the financial services sector and hence concentration risk is expected to be high. Also, as with all equity investing, there is the risk that companies in that specific sector will not achieve its expected earnings results, or that an unexpected change in the market or within the company will occur, both of which may adversely affect investment results. Thus investing in a sector specific fund could involve potentially greater volatility and risk. The risk factors associated with the Sectoral Fund are in addition to the standard risk factors applicable to all the Schemes of the Mutual Fund.

Sundaram Nifty 100 Equal Weight Fund: Performance of the NIFTY 100 Equal Weighted Index will have a direct bearing on the performance of the scheme. In the event the underlying Index is dissolved or withdrawn by India Index Services and Products Ltd. (IISL), the Trustees reserve the right to modify the schemes so as to track a different and suitable index and appropriate intimation will be sent to the unitholder of the scheme. Tracking errors are inherent in any indexed fund and such errors may cause the scheme to generate returns, which are not in line with the performance of the NIFTY 100 Equal Weighted Index. Such variations, referred to as tracking error, shall be maximum of 2% per annum, but may vary substantially due to several factors including but not limited to: • Any delay experienced in the purchase or sale of shares due to liquidity of the market, settlement and realization of sales proceeds and the registration of any security transfer and any delays in receiving cash and scrip dividends and resulting delays in reinvesting them. • The NIFTY 100 Equal Weighted Index reflects the prices of securities at close of business hours. However, the Fund may buy or off-load securities at different points of time during the trading session at the then prevailing prices which may not correspond to the closing prices on the National Stock Exchange (NSE). • IISL undertakes a periodic review of the scrips that comprise the NIFTY 100 Equal Weighted Index and may either drop or include new securities. In such an event the Fund will endeavor to reallocate its portfolio but the available investment / disinvestment opportunities may not permit precise mirroring of the NIFTY 100 Equal Weighted Index immediately. • The potential for trades to fail, which may result in the particular scheme not having acquired shares at a price necessary to track the index

Sundaram Liquid Fund: Interest rate risk: Changes in the prevailing rates of interest are likely to affect the value of the Scheme's holdings and consequently the value of the Scheme's units. • Derivative risk: The Scheme may use derivative instruments such as Interest Rate Swaps, Forward Rate Agreements or other derivative instruments for the purpose of hedging and portfolio balancing and trading, as permitted under the Regulations and guidelines. usage of derivatives will expose the Scheme to certain risks inherent to such derivatives. There is risk of capital loss. • Capital loss risk: The net Asset Value (NAV) of the Scheme is exposed to market fluctuations, and its value can go up as well as down. Investors may lose their entire principal. • Credit Risk: Credit Risk refers to the risk of failure of interest (coupon) payment and /or principal repayment. • Liquidity Risk: A lower level of liquidity affecting an individual security or an entire market may have an adverse bearing on the value of the Scheme's assets. • Price Risk: As long as the Scheme remains invested, its net Asset Value (NAV) would be exposed to market fluctuations, and its value can go up as well as down.

Sundaram Overnight Fund: Some of the specific risk factors related to the Scheme include, but are not limited to the following: • The returns of the Scheme will be affected by changes in interest rates. • Debt market while fairly liquid can at times experience lack of liquidity which may restrict the ability of the Scheme to sell securities resulting in the Scheme incurring losses. • Investments in debt instruments exposes the Scheme to credit risk i.e. the possibility of non-repayment by the issuer of the debt instrument. This can lead to the Scheme incurring losses. • Various types of fixed income securities carry varying levels and types of risk. So the risk may increase or decrease depending upon the investments made e.g. corporate bonds carry a higher level of risk than Government securities. Further even among corporate bonds, AAA rated bonds are comparatively less risky than AA rated bonds. • The AMC may invest in lower rated / unrated securities offering higher yields. This may increase the absolute level of risk of the portfolio. • Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are un-invested and no return is earned thereon resulting in losses.

Sundaram Money Market Fund: Changes in the prevailing rates of interest are likely to affect the value of the Scheme's holdings and consequently the value of the Scheme's Units. The Scheme may use derivative instruments such as Interest Rate Swaps, Forward Rate Agreements or other derivative instruments for the purpose of hedging and portfolio balancing and trading, as permitted under the Regulations and guidelines. Usage of derivatives will expose the Scheme to certain risks inherent to such derivatives. Thus, there is risk of capital loss. Investing in Repo in corporate debt and securities lending entails several risks which can impact the performance of the scheme. Changes in the prevailing rates of interest are likely to affect the value of the Scheme's holdings and consequently the value of the Scheme's.

Sundaram Low Duration Fund: • Interest rate risk: Changes in the prevailing rates of interest are likely to affect the value of the Scheme's holdings and consequently the value of the Scheme's units. • Derivative risk: The Scheme may use derivative instruments such as Interest Rate Swaps, Forward Rate Agreements or other derivative instruments for the purpose of hedging and portfolio balancing and trading, as permitted under the Regulations and guidelines. usage of derivatives will expose the Scheme to certain risks inherent to such derivatives. There is risk of capital loss. • Capital loss risk: The net Asset Value (NAV) of the Scheme is exposed to market fluctuations, and its value can go up as well as down. Investors may lose their entire principal. • Credit Risk: Credit Risk refers to the risk of failure of interest (coupon) payment and /or principal repayment. • Liquidity Risk: A lower level of liquidity affecting an individual security or an entire market may have an adverse bearing on the value of the Scheme's assets. • Price Risk: As long as the Scheme remains invested, its net Asset Value (NAV) would be exposed to market fluctuations, and its value can go up as well as down.

Sundaram Medium Duration Fund: Changes in the prevailing rates of interest are likely to affect the value of the Scheme's holdings and consequently the value of the Scheme's Units. The Scheme may use derivative instruments such as Interest Rate Swaps, Forward Rate Agreements or other derivative instruments for the purpose of hedging and portfolio balancing and trading, as permitted under the Regulations and guidelines. Usage of derivatives will expose the Scheme to certain risks inherent to such derivatives. There is risk of capital loss.

Sundaram Ultra Short Duration Fund: • Interest rate risk: • Derivative risk: • Capital loss risk: • Credit Risk • Liquidity Risk • Price Risk: Sundaram Arbitrage Fund: a) The Scheme proposes to invest in equity and equity related instruments by identifying and exploiting price discrepancies in cash and derivative segments of the market. These investments by nature are volatile as the prices of the underlying securities are affected by various factors such as liquidity, time to settlement date, news flow, spreads between cash and derivatives market at different points of time, trading volumes, etc. b) There is no guarantee that the Fund Manager will be able to spot investment opportunities or correctly exploit price discrepancies in the different segments of the market. c) The Risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. d) The Scheme is also expected to have a high portfolio churn, especially in a volatile market. e) There is an execution risk while implementing arbitrage strategies across various segments of the market, which may result in missed investment opportunities, or may also result in losses/high transaction costs. f) In case of a large outflow from the Scheme, the Scheme may need to reverse the spot-futures transaction before the settlement of the futures trade. While reversing the spotfutures transaction on the exchange, there could be a risk of price of the market being different from the price at which the actual reversal is processed. g) While the futures market is typically more liquid than the underlying cash market, there can be no assurance that ready liquidity would exist at all points in time for the Scheme to purchase and close out a specific futures contract. h) In case of arbitrage, if futures are allowed to expire without corresponding buy/sell in cash market, there is a risk that price at which futures expires, may/may not match with the actual cost at which it is bought/sold in the cash market in last half an hour of the expiry day (Weighted average price for buy or sell). i) Investment in equities and equity related instruments involve risks such as Stock Market Volatility, equity Price Risk, Dependency Risk, Temporary Investment Risk, Non-diversification Risk, Regulation-Change Risk and etc. j) Investments in Debt Securities and Money Market Instruments involve risks such as Interest Rate Risk, Credit Risk, Price Risk, Market Risk, Liquidity Risk, Risk relating to investment pattern, Risks relating to duration, Non-diversification Risk, Limited Liquidity, Price Risk etc. k) Investment in Repo in Corporate Bond involve risks such as Counter party risk, Market Risk, Credit Risk and etc. l) Segregated portfolio may be created, in case of a credit event at issuer level i.e. downgrade in credit rating by a SEBI registered Credit Rating Agency (CRA) which involves Liquidity Risk & Credit Risk etc.

Sundaram Banking and PSU Fund: Changes in the prevailing rates of interest are likely to affect the value of the Scheme's holdings and consequently the value of the Scheme's Units. The Scheme may use derivative instruments such as Interest Rate Swaps, Forward Rate Agreements or other derivative

instruments for the purpose of hedging and portfolio balancing and trading, as permitted under the Regulations and guidelines. Usage of derivatives will expose the Scheme to certain risks inherent to such derivatives. There is risk of capital loss.

Sundaram Corporate Bond Fund: Changes in general market conditions, Government policies / laws, and factors impacting capital/ debt/ money markets in particular, as also changes in level of interest rates, trading volumes, liquidity, market volatility, and settlement/ trading procedures may affect the value of scheme's investments and consequently the NAV of the scheme. Variations in prevailing rates of interest will impact the value of scheme's investment in debt/ money market securities and hence the NAV of the scheme. Debt securities are subject to credit risk, which means that the issuer of the security may default in meeting the obligations under the security. Securities which are not quoted or thinly traded on the stock exchange carry liquidity risk. Investments in debt securities are subject to reinvestment risk as, due to non-availability of appropriate securities, sometimes the interest rate at which interest /maturity proceeds of such securities are invested may fall. Risk associated with securitised debt is similar to the listed factors. Risk Factors - Equity Markets: Stock Market Volatility, Equity Price Risk, Dependency Risk, Temporary Investment Risk and Non-Diversification Risk and Concentration Risk, to name a few. Sundaram Short Duration Fund: • Interest rate risk • Derivative risk • Capital loss risk • Credit Risk • Liquidity Risk • Price Risk • The holding of a cash position and accrued income prior to distribution and accrued expenses. • Disinvestments to meet redemption, recurring expenses, IDCW payout etc. • Segregated portfolio may be created, in case of a credit event at issuer level i.e. downgrade in credit rating by a SEBI registered Credit Rating Agency (CRA) which involves Liquidity Risk & Credit Risk etc. For detailed scheme-specific risk factor refer the respective Scheme Information Documents.

Sundaram Diversified Equity and Sundaram Tax Savings Fund: The liquidity of the scheme's investments is inherently restricted by trading volumes and settlement periods. In the event of an inordinately large number of redemption requests, or of a restructuring of the scheme's investment portfolio, these periods may become significant. In view of the same, the trustees have the right in their sole discretion to limit redemptions (including suspending redemptions) under certain circumstances or unusual market conditions including stock market closure (otherwise than for ordinary holidays), unforeseen circumstances where disposing assets of the scheme is not in the best interest of unitholders, extreme volatility of markets or if so directed by SEBI. • Investment in ELSS is subject to lock-in period of three years. During this period investors will not be able to redeem their units. To this extent the liquidity for the investor is restricted and this may restrict exit at opportune moments. • Varying levels of liquidity, higher volatility, lower levels of transparency, management bandwidth, difficulty in accessing funds and technology, low entry barriers, higher impact costs, risks specific to unlisted companies and changes in government policies, to name a few, are key factors that may impact the performance of and liquidity in the Scheme. The names of the schemes do not in any manner indicate either quality or future prospects and returns.
