GLOSSARY

Sharpe Ratio

Sharpe Ratio is a risk to reward ratio, it measures portfolio returns generated in excess to the investment in risk-free asset, for per unit of total risk taken. While, positive Sharpe ratio indicates, portfolio compensating investors with excess returns (over risk-free rate) for the commensurate risk taken; negative Sharpe ratio indicates, investors are better off investing in risk-free assets.

Beta

Beta (β) of a portfolio is a number indicating the relation between portfolio returns with that of the market index i.e. it measures the volatility, or systematic risk, of a portfolio in comparison to the market as a whole.

Standard Deviation

A statistical measure that defines expected volatility/ risk associated with a portfolio. This explains the variation/ deviation from the average returns delivered by the portfolio. A higher standard deviation means higher volatility (risk) and a lower standard deviation means lower volatility.

Risk Free Return

The theoretical rate of return of an investment with safest (zero risk) investment in a country.

Total Expense Ratio

Total expenses charged to scheme for the month expressed as a percentage to average monthly net assets.

Tracking Error

Tracking error indicates how closely the portfolio return is tracking the benchmark Index return. It measures the deviation between portfolio return and benchmark index return. A lower tracking error indicates portfolio closely tracking benchmark index and higher tracking error indicates portfolio returns with higher deviation from benchmark index returns.

Portfolio Turnover Ratio

Portfolio Turnover Ratio is the percentage of a fund's holdings that have changed in a given year. This ratio measures the fund's trading activity, which is computed by taking the lesser of purchases or sales and dividing by average monthly net assets.

HOW TO READ A FACTSHEET

Fund Manager

An employee of an asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.

SIP

SIP or systematic investment plan works on the principle of making periodic investments of a fixed sum. It works like a recurring bank deposit. For instance, an investor may opt for an SIP that invests Rs 500 every 15th of the month in an equity fund for a period of three years.

NAV

The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and

permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund. Benchmark A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the NIFTY, SENSEX, BSE200, BSE500, 10-Year Gsec.

Dividend / IDCW

"Dividend" / "IDCW" means income distributed on Mutual Fund Units from the distributable surplus, which may include a portion of the investor's capital {i.e. part of Sale Price (viz. price paid by the investor for purchase of Units) representing retained realized gains (equalization reserve) in the Scheme books}.

Exit Load

Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is reduced from the prevailing NAV at the time of redemption. The investor will receive redemption proceed at net value of NAV less Exit Load. For instance, if the NAV is Rs. 100 and the exit load is 1%, the investor will receive Rs. 99.

Modified Duration

Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

Standard Deviation

Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

Sharpe Ratio

The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

Beta Ratio (Portfolio Beta)

Beta is a measure of an investment's volatility vis-a-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

Average portfolio PE (Average P/E)

It is the price to earnings ratio of the stocks calculated for the entire portfolio on a weighted average basis. Average portfolio price to book ratio (Average P/BV) It is price to book value of the stocks calculated for the entire portfolio on a weighted average basis.

Average portfolio dividend yield (Average Dividend Yield)

It is the dividend yield of the stocks calculated for the entire portfolio on a weighted average basis.

Net Equity

Net equity level is the net equity exposure percentage adjusted for any derivative positions in stocks or index for hedging or rebalancing purposes.

AUM

AUM or assets under management refers to the recent / updated cumulative market value of investments managed by a mutual fund or any investment firm.

Holdings

The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Nature of Scheme

The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

Rating Profile

Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

INVESTMENT FRAMEWORKS

Over the last year, we have developed and charged forward with a new investment philosophy: Non-dogmatic value investing with a contrarian bias.

This new investment approach stands for the strength, resilience, and unwavering determination that are characteristically associated with our eponymous sun sign. It is a multidisciplinary approach that draws on a latticework of mental models across a plethora of different fields. It means that we invest with a focus on the true value of a business without sticking to a single method/framework and often go against the crowd.

We use first principles thinking to break down complex problems to their basic elements, allowing us to understand the core value drivers rather than relying on the colloquial wisdom of "this always happens" or "that never works".

We use probabilistic thinking to evaluate the likelihood of different outcomes rather than assuming certainty. Lastly adding mental models, this combination allows us to understand complex market dynamics and identify undervalued opportunities that others might overlook, leading to potentially higher returns by capitalizing on market inefficiencies.

Types of Stocks We Have

Tactical Investing

"We practice Tactical Investing, dynamically adjusting positions based on momentum driven strategies, capitulation indexing and macroeconomic trend analysis to seize short-term opportunities while maintaining a long-term investment focus."

Contrarian Investing

"We employ Contrarian Investing, seizing opportunities in under-appreciated assets capitalizing on market mispricing for potential reversals and subsequent gains."

Value Investing

"We specialize in Value Investing, meticulously evaluating stocks to uncover undervalued opportunities, aiming for long-term appreciation by leveraging market inefficiencies."

Growth Investing

"We prioritize Growth Investing, targeting companies with superior earnings potential coupled with efficient and prudent capital allocation strategies in burgeoning industries or with disruptive technologies, strategically allocating capital for long-term value creation"

Consistent Compounder Investing

"We specialize in Consistent Compounder Investing, focusing on companies with durable competitive advantages and robust cash flows generation capabilities to deliver sustained, compounding returns regardless of short-term market fluctuations."

MACROECONOMIC UPDATES

Global Growth

The IMF has revised global growth projections upward, reflecting resilience despite challenges. In its July outlook, the forecast for 2025 was raised by 20bps to 3.0% and for 2026 by 10bps to 3.1%. Advanced economies saw a 10bps upgrade, while emerging markets gained 30bps, supported by front-loading ahead of tariffs, lower effective tariff rates, improved financial conditions, and fiscal expansion in key regions. U.S. growth is now expected at 1.9% in 2025 (up from 1.8%) and 2.0% in 2026 (up from 1.7%). China's forecast rose 0.6% to 5.1% in 2025 and 0.1% to 4.7% in 2026.

Interest Rates: Global interest rates are trending lower, though yields remain elevated. In September, the Federal Reserve reduced its policy rate by 25bps, with the updated dot plot indicating two more cuts expected in 2025. Despite this easing stance, the U.S. benchmark yield only edged down to 4.1% in September from 4.3% in August. Fed Chair highlighted labor market slack as the key reason behind the rate reduction.

India's Growth

India's economic growth in Q1FY26 exceeded expectations, with GDP rising 7.8% (GVA 7.6%) versus consensus of 6.7%. The upside came mainly from manufacturing (7.7%) and services (9.3%). On the demand side, private consumption grew 7.0%, government spending 7.4%, and investments 7.8%. Nominal GDP at 8.8%, just 1% above real GDP, also contributed to the strong print. Looking ahead, August high-frequency indicators signaled mixed momentum, with aggregate demand showing some moderation. Tariff disruptions may weigh on growth, but GST rationalization is set to support consumption. We upgrade FY26 growth to 6.8% from 6.5%. Farm sector prospects remain positive due to favorable rainfall, supporting incomes and stabilizing food prices. The GST cut's pass-through will help keep inflation contained. Additionally, the RBI's front-loaded 100bps rate cut is designed to spur demand. With inflation under control and food prices easing, consumption is expected to remain a key driver of growth.

MONETARY CONDITIONS

Monetary conditions remain supportive as global central banks shift focus from inflation to growth. In September, the U.S. Federal Reserve cut its policy rate by 25bps, citing labor market weakness as the key driver. Future actions will remain data-dependent, with the Fed's dot plot indicating two additional cuts within the year.

In India, bond markets responded positively, with the benchmark yield easing to 6.48% in September from 6.60% in August, as concerns about excess borrowing following the GST cut subsided. On the inflation front, headline CPI edged up to 2.07% in August from 1.55% in July, mainly driven by seasonal increases in food prices. Despite this uptick, inflation remains comfortably under control, providing room for accommodative policy. With borrowing concerns easing, inflation still within acceptable limits, and monetary conditions turning more growth-oriented globally, the overall policy environment is favorable for supporting demand and sustaining India's growth momentum in FY26.

Source: B&K Securities

PRIVATE SECTOR CAPEX

India's private capital expenditure has slowed, reaching a decade-low share of 33% in total investments in FY24, mainly due to weak spending by unlisted companies amid inflation and global uncertainties.

Conversely, listed companies significantly raised their capex, especially in telecom, oil, chemicals, and power sectors. Although the government's PLI scheme attracted substantial investments, private-sector engagement is essential for sustained economic growth, with manufacturing, infrastructure, and technology sectors showing promising long-term potential.

Source: B&K Securities

Benchmark difference between US and India rose from 220bps in Aug to 260bps in Sep as US yield was lower while Indian benchmark yield was almost flat.

MONTHLY INDICATORS

- **Manufacturing PMI and Services PMI:** India's manufacturing PMI rose to 59.3 in August from 59.1 in July, marking the strongest operating conditions in 17 years, driven by rapid production growth. However, higher U.S. tariffs on Indian goods weighed slightly on export orders, though robust domestic demand cushioned the impact. Optimism for future output remains strong.

Services PMI surged to a 15-year high at 62.9 in August, up from 60.5 in July, supported by rising new orders and international sales. Firms responded with increased hiring, but higher labor costs and strong demand pushed both input and output prices sharply upward, with inflation reaching 13-year highs.

- **GST Collections:** GST collections in August stood at ₹1.86 lakh crore versus ₹1.96 lakh crore in July, up 6.5% YoY. Net collections were ₹1.67 lakh crore, up 10.7% YoY. April–August gross GST reached ₹10.04 lakh crore (vs ₹9.14 lakh crore), while net stood at ₹8.78 lakh crore.

- **E-way Bill Generation:** E-way bill generation in August remained strong at 12.91 crore, following July's all-time high of 13.19 crore, marking 22.4% YoY growth. A key driver could be the pre-tariff export push by India. Robust E-way bill activity may translate into healthy GST collections for August (reported in September).

- **Inflation:** India's CPI inflation rose to 2.07% in August from July's 8-year low of 1.55%, driven by higher food and beverage prices. Food inflation turned positive at 0.05%, with slower declines in vegetables and pulses, while cereals stayed steady. Oils and fats inflation climbed to 21.2%. Housing, fuel, and miscellaneous categories remained stable, while core inflation was flat at 4.15%.

- **Industrial Production:** India's industrial production grew 4.0% in August 2025, improving from 3.5% in July. Growth was led by mining at 6.0%, manufacturing at 3.8%, and electricity at 4.1%. Within manufacturing, key contributors were basic metals (12.2%), coke and refined petroleum products

(5.4%), and motor vehicles, trailers, and semi-trailers (9.8%). On a use-based view, capital goods rose 4.4%, infrastructure surged 10.6%, consumer durables increased 3.5%, while non-durables contracted by 6.3%. Overall, the data reflects steady momentum in industrial activity, supported by strong infrastructure demand, despite weakness in consumer non-durables.

- **Trade Balance:** India's merchandise exports rose 6.7% YoY in August to \$35.1bn from \$32.9bn, while imports fell 10% to \$61.6bn from \$68.5bn, driven by lower gold imports. Consequently, the trade deficit narrowed sharply to \$26.5bn from \$35.6bn last year.

Services exports grew 12.2% YoY to \$34.0bn, while services imports increased 6% to \$17.5bn. The services trade surplus expanded to \$16.6bn from \$13.9bn a year earlier, highlighting resilience in India's external sector despite weaker merchandise trade, with services continuing to provide strong support.

Source: B&K Securities

INTER-BANK LIQUIDITY AND RBI

In September, inter-bank liquidity stayed in large surplus, though it eased from August's peak of ₹3.3 trillion to ₹2.0 trillion due to tax outflows and the reversal of RBI's forward positions. The RBI's August bi-monthly policy kept the repo rate steady at 5.5% with a neutral stance. While less dovish than June's review, the tone highlighted a strong pro-growth bias. GDP growth for FY26 was maintained at 6.5%, while inflation forecasts were lowered to 3.1% from 3.7%.

August CPI rose to 2.07% versus 1.55% in July, driven mainly by seasonal food price increases. Looking ahead, with inflation expected to rebound to 4.5% in FY27, the current repo could mark the terminal rate for this cycle. However, external conditions remain volatile. With the U.S. Fed cutting rates in September and markets pricing two more 25 bps cuts in 2025, further easing of inflation projections could justify another RBI cut in FY26.

Source: B&K Securities

	YoY Growth
Bank Credit	10.1%
Electricity Consumption	3.9%
E-way Bill	22.4%
GST Collection	6.5%

EXTERNAL SECTOR

In August, merchant exports stood at \$35.1bn, up 6.7% YoY from \$32.9bn, while imports declined 10.0% to \$61.6bn from \$68.5bn, largely due to reduced gold imports. Consequently, the trade deficit narrowed significantly to \$26.5bn from \$35.6bn a year earlier.

Services sector performance remained strong, with exports rising 12.2% YoY to \$34.0bn versus \$30.3bn, while imports grew 6.0% to \$17.5bn from \$16.5bn. This resulted in a services surplus of \$16.6bn, compared to \$13.9bn last year. Overall, the combined improvement in goods and services balances contributed to a healthier external trade position in August.

Source: B&K Securities

CURRENCY

External sector turbulence has intensified, weighing on the Indian rupee. Sentiment has turned negative with Trump's additional tariffs on India and the imposition of a \$100,000 fee on fresh H1B visas. Alongside continued FPI outflows, these factors have kept the INR weak. Since January, the USD has weakened 11.2%, but INR has depreciated 3.7% against USD, 12% against GBP, 17% against EUR, 11% against JPY, and 6% against CNY.

Given the RBI's active role in the FX market, it is expected to keep INR within a narrow range to maintain export competitiveness, with depreciation likely aligning to the inflation-interest rate differential of 1.5-2.0%. India's REER fell to 97.1 in July and is estimated at 95.0 in September, well below the long-term average of 102.1, implying undervaluation. This could create near-term appreciation pressure. However, external headwinds, high tariffs, and visa fee hikes suggest persistent pressure on INR despite undervaluation.

SECTORAL OUTLOOK

HEALTHCARE SECTOR

India's healthcare sector is witnessing significant growth, driven by both government initiatives and private sector participation. The Union government has introduced several reforms aimed at increasing healthcare access, particularly in underserved areas. One of the key developments is the expansion of medical education, with over 10,000 additional MBBS and postgraduate seats being added across the country. This is part of a broader effort to tackle the shortage of medical professionals and improve healthcare delivery, especially in rural and remote regions.

In terms of financial support, the healthcare sector received a notable boost with an increase in budget allocation for infrastructure, medical education, and research. The government's focus on health insurance schemes, such as Ayushman Bharat, continues to drive affordability by

providing coverage to millions of citizens. The ongoing push towards digital healthcare is transforming patient care with the implementation of electronic health records, telemedicine, and online consultations, particularly in rural areas where healthcare infrastructure has traditionally been limited.

Technological advancements are also playing a pivotal role in the sector's growth. AI and machine learning applications are becoming more widespread, with innovations in diagnostic tools and personalized treatment plans. Moreover, India is making strides in medical technology development, such as indigenous advancements in dental care and diagnostic tools, helping reduce dependence on imports. With these combined efforts, India's healthcare sector is positioned for continued expansion and improvement, aiming to offer quality healthcare to a larger portion of the population.

Sources: Internal Research

TOURISM

Information India's tourism sector is seeing significant growth as of September 2025, with a strong rebound in both domestic and international travel. Foreign Tourist Arrivals (FTAs) reached millions by August, and domestic tourism recorded over 300 crore visits in the same period. The sector contributed a substantial share to India's GDP, highlighting its importance to the economy. Additionally, medical tourism has grown, with India becoming an increasingly popular destination for international patients seeking high-quality healthcare services at competitive prices.

Several Indian states have introduced innovative tourism projects to enhance their offerings and attract more visitors. Telangana, for instance, launched a comprehensive ₹15,279 crore tourism development plan that includes luxury wellness retreats and wildlife safaris, aiming to create thousands of jobs. In Meghalaya, a focus on sustainable

tourism development is expected to generate significant employment, while Himachal Pradesh's Cold Desert Biosphere Reserve was added to UNESCO's list, elevating the region's global ecological standing.

The sector is also embracing experiential and sustainable tourism, with smaller towns and rural areas benefiting from the rise in remote work and improved connectivity. Initiatives such as adventure festivals and eco-tourism projects are gaining popularity, while the government's support for theme-based tourism circuits continues to expand. Furthermore, recent reforms in GST have made domestic travel more affordable, stimulating increased tourism across the country. Overall, India's tourism sector is poised for continued growth, driven by strategic investments, regional development, and a focus on sustainability.

Sources: Internal Research

METALS & MINING

The metals and mining sector in India has shown a strong recovery as of September 2025, with a significant uptick in output. The sector saw a 6% year-on-year growth in mining activities in August 2025, largely driven by increased production of key minerals like iron ore, manganese, and bauxite. This recovery is attributed to improved operational efficiencies, better resource management, and favorable demand from downstream industries such as construction and manufacturing.

Government policies, such as the Atmanirbhar Coal Mission, have been pivotal in boosting domestic production and reducing reliance on imported coking coal, which is vital for steel production. Furthermore, the exploration of new

mining frontiers, including deep-sea polymetallic nodules, aligns with India's push for resource diversification and self-reliance in critical minerals. This strategy is complemented by innovations in mining techniques, such as beneficiation processes that are improving the quality and yield of extracted materials.

Sustainability has also emerged as a key focus, with initiatives aimed at minimizing the environmental impact of mining activities. These efforts, alongside collaborations with top research institutions, are reshaping the sector towards a more sustainable and efficient future. Overall, the sector is on a strong growth trajectory, poised to remain a cornerstone of India's industrial expansion.

Sources: Internal Research

TECHNOLOGY

India's technology sector is experiencing robust growth as of September 2025, driven by strategic investments, government initiatives, and a burgeoning startup ecosystem. The nation's IT industry is projected to reach a revenue exceeding \$282 billion in FY2025, marking a 5.1% year-on-year growth. This expansion is fueled by increased demand for services in artificial intelligence (AI), cloud computing, and cybersecurity. The government's proactive measures, such as the extension of the RoDTEP scheme until March 2026, aim to bolster the sector's competitiveness in the global market.

A notable trend is the decentralization of tech hubs beyond traditional centers like Bengaluru. Initiatives like Karnataka's 'Beyond Bengaluru' have led to the establishment of over 5,600 tech-related jobs in tier-II cities such as Mysuru, Mangaluru, and Chamarajanagar between 2021 and 2025. These developments are supported by significant

investments in semiconductor manufacturing and product engineering, with companies setting up facilities in these regions. This shift is indicative of a broader strategy to leverage local talent and foster innovation across the country.

Technological advancements are at the forefront of India's digital transformation. The launch of an indigenous 4G network, powered by homegrown technology, marks a significant milestone in enhancing digital sovereignty and connectivity. Complementing this, the rapid rollout of 5G services now covers over 700 districts, facilitating applications in precision agriculture, telemedicine, and smart infrastructure. Additionally, the establishment of AI data centers in regions like Mangaluru underscores the nation's commitment to advancing digital infrastructure. These initiatives collectively position India as a formidable player in the global technology landscape.

Fund Manager Comments : We have chosen to remain well diversified across emerging sectors. Companies with better visibility for growth have been preferred. As the fund remains sector-agnostic, we reiterate our optimistic view on select stock opportunities over sector movements.

Aggregate amount invested by the AMC and its Key Employees in Taurus Mid Cap Fund is **Rs. 131.96** Lakhs which is 1.03% of the AUM.

Total Amount held in Taurus Mid Cap Fund as per SEBI Circular relating to Alignment of interest of Key Employees ('Designated Employees') of Asset Management Companies ('AMCs') with the unitholder of the Mutual Fund Schemes (as on 30th September 2025)

Scheme Name	Amount Invested (In Lakhs)
Taurus Mid Cap Fund (G)	Rs. 36.12

1. Note: Mr. Anuj Kapil has been appointed as the Fund Manager for Taurus Mid Cap Fund w.e.f November 15, 2023 (Notice cum Addendum dated 9th November 2023). Earlier, since 23rd May 2022 Mr. Hardik Shah was Fund Manager for this scheme.

2. Note: Mr. Hemanshu Srivastava has been appointed as the Co-Fund Manager for Taurus Mid Cap Fund w.e.f July 18, 2024 (Notice cum Addendum dated 17th July 2024).

Why Taurus Mid Cap Fund?

- An opportunity to the investors to build wealth in the longer term by investing in quality midcap stocks which subject to associated risks, may result in capital appreciation.
- Intends to build a diversified portfolio across sectors in low number of companies aiming to increase the return potential with an acceptable risk profile.
- A bottom-up approach is followed to identify quality companies at attractive valuations.
- It also allocates its assets in the small cap space tactically to take exposure to the wealth creating opportunities in this space.

Fund Manager Comments : Scheme comprises stocks of businesses with low debt, stronger pricing power than their competitors, sustainable cash flows and good corporate governance, bought at discounted prices to our estimate of their intrinsic values. Occasionally, we may take very small positions in certain special situations.

Aggregate amount invested by the AMC and its Key Employees in Taurus ELSS Tax Saver Fund is **Rs. 212.04** Lakhs which is 2.78% of the AUM.

Total Amount held in Taurus ELSS Tax Saver Fund as per SEBI Circular relating to Alignment of interest of Key Employees ('Designated Employees') of Asset Management Companies ('AMCs') with the unitholder of the Mutual Fund Schemes (as on 30th September 2025)

Scheme Name	Amount Invested (In Lakhs)
Taurus ELSS Tax Saver Fund (G)	Rs. 25.84

Note: Mr. Anuj Kapil has been appointed as the Fund Manager for Taurus ELSS Tax Saver w.e.f August 07, 2023 (Notice cum Addendum dated 8th August 2023). Earlier, since 2nd May 2022 Mr. Ramneek Kundra was Fund Manager for this scheme.

Why Taurus ELSS Tax Saver Fund?

Qualifies for Tax Exemption under Section 80C of Income Tax Act, 1961

A 3-year lock-in period helps investors maintain longer term horizon

Market cap Agnostic

Invest in companies with attractive unit economics and risk/reward across market capitalizations

Long term Capital Appreciation

Hold a portfolio of companies that, in our opinion, have lower terminal value risk than an average company over long term

Balanced Portfolio Construction

Non dogmatic value investing with context: Compounders, Cyclicals, Special Situations and Asset Plays

Rational Approach

Buy, hold and sell businesses more objectively than try to be contrarian or with consensus

Investing in Businesses and Managements with long term track record

Reduces the risk of investing in companies that could potentially be poorly governed

Basket Approach in Select Sectors

Take positions across companies within undervalued sectors to reduce company specific risks and still actively take larger positions in companies with great long term track record of capital allocation and good growth prospects, as per our research

Note: Mr. Anuj Kapil has been appointed as the Fund Manager for Taurus Banking & Financial Services Fund w.e.f June 13, 2023 (Notice cum Addendum dated 15th June 2023). Earlier, since 1st November 2022 Mr. Hardik Shah was Fund Manager for this scheme.

Why Taurus Banking and Financial Services Fund?

- Since the banking system is the backbone of any growing economy, we are optimistic on the Indian BFSI Space.
- Post the reforms by the current government, Indian BFSI space is structurally in a sweet spot for long term growth.
- Positioned to benefit from improving financial inclusion across the country and capture the potential upside because of credit growth in the economy.
- Investment is done in the BFSI space where the companies as selected are well managed, adequately capitalized, resilient to liquidity shortage and have a potential to benefit from credit growth in the economy.

Fund Manager Comments : Overall, we have maintained a positive bias on Private Banks with decent capitalization coupled with prospects of improving credit demand. In NBFC sector, the exposure has been tilted to players who have clear resilience to liquidity shortage and a sustained growth prospect.

Fund Manager Comments : Infrastructure remains an important pillar of India growth story. However, we continue to align our portfolio with a strong balance sheet coupled with reasonable valuations. We believe that we are at the cusp of a capex cycle which will last for the coming 3-4 years. Hence the portfolio is more tilted towards companies which will benefit out of the capex cycle.

Aggregate amount invested by the AMC and its Key Employees in Taurus Infrastructure Fund is Rs. **32.17** Lakhs which is 3.42% of the AUM.

Total Amount held in Taurus Infrastructure Fund as per SEBI Circular relating to Alignment of interest of Key Employees ('Designated Employees') of Asset Management Companies ('AMCs') with the unitholder of the Mutual Fund Schemes (as on 30th September 2025)

Scheme Name	Amount Invested (In Lakhs)
Taurus Infrastructure Fund (G)	Rs. 4.49

Note: Mr. Anuj Kapil has been appointed as the Fund Manager for Taurus Infrastructure Fund w.e.f November 15, 2023 (Notice cum Addendum dated 9th November 2023). Earlier, since 13th June 2023 Mr. Hardik Shah was Fund Manager for this scheme.

Why Taurus Infrastructure Fund ?

- For any growing economy, investments in infrastructure are the key to future economic growth. Recognizing that good infrastructure is an enabler for economic growth, the incumbent government is focused on improving India's infrastructure by undertaking public spending as well as incentivizing private capex.
- Dedicated infrastructure Fund that can invest in various sub-sectors which are likely to outperform in the on-going capex driven cycle.
- To provide investors with opportunities for potential long-term growth through investments in a diversified basket of stocks in sectors which according to us, directly or indirectly aid in contributing to India's Infrastructure growth story.
- The Infrastructure space can be a broad gamut to look at, however we prefer to invest in select high growth sub sectors. We desire to stick to a range of 30-32 stocks that may provide an optimal trade-off between concentration risk and returns.

Why Taurus Nifty 50 Index Fund ?

- Great for investors who want to invest in equities but do not want to expose yourself to the risks associated with actively managed equity Funds
- Great for investors who want to benefit from India's economic growth but do not have time/ability to research individual stocks or processes of active mutual Funds
- Equities are volatile in short term, but an index Fund averages out gains over longer term, leading to more sustainable returns
- Less than one-fifth the management fee of an actively managed equity mutual Fund
- Actively managed equity mutual Funds are prone to human errors and not beating Nifty50 index while charging higher fee whereas our Index Fund has no such risk as it mimics the index performance while charging lower fee

"If you like spending six to eight hours per week working on investments, do it. If you don't, then dollar-cost average into index Funds." ~Warren Buffett.

Fund Manager Comments : The index Fund continues to track the performance of its benchmark indices Nifty. The Fund portfolio consists of the stocks in the same weight as they are in the Nifty Index. The strategy of the investment is to mirror the index return by minimizing the tracking error with its benchmark.
